Don't be Satisficed!

Better Surveys for Better Data

Don’t be Satisfied!

Kelley Rowan, Digital Archives Librarian
I need a question addressing gender / sex

- **Sex** = biology, determined by anatomy

- **Gender** = gender identity is the internal perception of oneself
Gender

How do you describe yourself?

To which gender identity do you most identify?

- Female
- Male
- Transgender Female
- Transgender Male
- Gender Variant/Non-Conforming
- Not Listed
- Prefer Not to Answer
*Do you need this question?

• Why are you collecting this data?

• What significant changes might be made if you had this data?

*applies to all demographics
Keep it short!
Satisficing

Satisfy & suffice:

Answering without concern to accuracy

Satisficing reduces cognitive burdens
Why people satisfice

- Survey is too long
- Survey has no numbers/progress bar
- Comprehension issues
What satisficing looks like in your results

- choosing explicitly offered no-opinion or 'don't know' response option
- choosing socially desirable responses
- non-differentiation or straight-lining when a battery of questions asks for ratings of multiple objects on the same response scale
- acquiescence response bias, which is the tendency to agree with any assertion, regardless of its content
- selecting the first reasonable looking option
- skipping items
- abandoning the survey or terminating the survey early
Longitudinal

• Repeating a cross-sectional survey at least once in the future

• Fixed-sample panel design
  • Re-sampling the same few people at specific point over time

• Cohort study
  • Following people experiencing a specific event over time

Cross-sectional

• Collecting information and opinions at one specific point in time
Common types of questions

- Close ended
- Open ended
- Likert scale
- Vignette
- Retrospective or prospective
- Dichotomous
Troublesome questions

Sensitive questions

- Recall (retrospective questions)
- Open ended
- Some Vignettes

High cognitive load questions
Writing sensitive questions

Problems encountered

• Social desirability bias
• High non-response
• Privacy concerns

Sample Questions

• How often do you place items in the recycle bin?
• Have you ever been admitted to a hospital with a life-threatening illness?
• Have you ever experienced sexual abuse?
Improving response rate for sensitive questions

- Use range responses (e.g. 0-3, 4-6, etc.)
- Add a decline to answer option
- Emphasize anonymity & privacy
- Choose the delivery mode carefully (should be done in private)
- Embed in the middle
- Avoid asking more than one
Close ended question

Types
• Multiple choice
• Checklist
• Likert scale (e.g. strongly agree)
• Dichotomous (e.g. yes/no)
• Rating (e.g. rank in order of...)

Benefits
• Easy to quantify
• Less social desirability bias
• Higher degree of anonymity
Close ended question problems

- Respondents are more likely to select answers in the TOP THIRD of a list of any significant length

- Randomize

- Allow multiple answers

- Switch to open ended

- Decrease the number of answers
Open ended questions

What do you want to be when you grow up?

Benefits
• Respondents not limited by your answer choices
• Does not force potentially invalid responses
• More substance than close ended
• Easy to write and straightforward

Tips
• Avoid writing a dichotomous question (yes/no)
• Avoid turning it into a rating scale
• Do not write possible answers in the question
• *High cognitive load
Vignettes

- Good for sensitive questions
- Keep it brief
- Keep the story interesting
- Be realistic
- Watch out for bias
Sample vignette

You receive a request for a name to be removed from a particular item in your digital library, directly from the individual in question. The requester claims that the inclusion of their name in an openly accessible digital library violates their privacy.

The name appears in print in your digital regional newspaper collection, within the student newspaper that was published in print at your institution, and later digitized for the digital collection.

This content has been run through optical character recognition (OCR) software and has been fully indexed by search engines such as Google.

How would you respond?
Writing a bias-free question

Problem: Do a significant number of people in Colorado think repealing the recreational marijuana law would be healthier for people overall?
✓ You have two questions – DO NOT join them!
✓ Do you believe the recreational marijuana law should be repealed? (Yes, No)
✓ Do you believe marijuana is healthy or unhealthy when used in moderation (specify moderation)? Use Likert scale
Retrospective and Prospective questions

How many times did you visit the park in the last two years?

- Recall requires cognitive heavy lifting
- Wording needs to be precise
- Telescoping error (remembering an event happening more recently than it did)
- Recall loss

Prospective questions

Lessen the time frame
Good for longitudinal studies
Likert scale (5, 7, 9)

strongly agree
mostly agree
neutral
somewhat disagree
strongly disagree

**NEVER change the order or direction in your survey!**
Watch out!

- Length
- **Habituation** (too many similar questions causes satisficing)
- Cognitive load
- Sensitive questions
- Bias

As a student, what is your understanding of campus policies concerning academic misconduct (i.e. cheating, plagiarism) at FIU?

- Very High
- High
- Medium
- Low
- Very Low

Do you know about the FIU Student Conduct and Honor Code?

- Yes
- No
- I do now
Content order
Beginning

• Cover Letter (email, survey intro)
• Length (# of questions)
• Time to finish
• Description of study
• Intended use of results
• Reassurance of anonymity and confidentiality
• Consent form (question 1 & skip logic)
• Incentives

• **Start with an easy and interesting question**
Introduction: example 1

- **Study Description**
  - You have been asked to participate in a research study to evaluate digital library (DL) design guidelines that address blind and visually impaired users’ accessibility, usability, and utility problems across different DLs. The guidelines address the help-seeking situations in BVI users’ interactions with DLs and have been developed based on prior research conducted by the research team at University of XXXX and its partners.
  - For this study, you will review the current guidelines associated with help-seeking situations identified from prior research. You will be asked to rate each of the guidelines and provide feedback for improving the guidelines.
  - Your participation will take approximately two to four hours to complete.

- **Study Procedures**
  - Your participation will involve the following activities:
    - You will complete a survey which consists of your demographic information and information resource uses, as well as your past experience using different types of information retrieval systems. This survey will also ask you to assess a series of DL design guidelines, including providing ratings, rationale, and suggestions for improvement (approximately 2-4 hours). The survey does not need to be completed in one sitting, and you are welcome to complete it as your schedule permits over a two-week period.
    - **Risks and Minimizing Risks**
      - There is no known risk occurring for participants in participation in the research. The researchers will try to minimize or remove the risks by only revealing your participant number. The confidentiality of your responses will be protected at all times when the data are collected and analyzed, and when the results are reported in a published paper. No names will be attached to the survey. All data will be stored on a password-protected computer by the principal investigator at the School of Information Studies. The collected coded dataset will be archived in the XXXXX, which is an institutional repository at the University of XXXX. The files will also be stored on a password-protected computer by the principal investigator at the School of Information Studies. All data will be stored with a coded participant identification number. Coded data will be made available for use in the analysis by the research team.
    - **Benefits**
      - Once the survey is completed, you will be given a $100 Amazon electronic gift card as a token of appreciation for your participation in the study. If you only complete only a part of the survey, you will not receive prorated compensation. The long-term benefit of the study will be the design of better digital libraries that will help blind and visually impaired users effectively retrieve information.
    - **Study Costs**
      - You will not be responsible for any of the costs from taking part in this research study. The costs refer to any cost related to the development and management of the study.

- **Confidentiality**
  - All information collected about you during the course of this study will be kept confidential to the extent permitted by law. The researchers may decide to present findings to others, or publish our results in future journals or at scientific conferences. Only the authorized research team members will have access to the information. However, the Institutional Review Board at XXXXX or a proper federal agencies like the Office for Human Research Protections may view your record.
  - The collected data will be confidential and will only reveal each participant’s number.
  - All data, including name and associated demographic data, collected from participants will be stored and kept in locked area by the researchers in the School of Information Studies at the XXXXX. The files will also be stored on a password-protected computer by the principal investigator at the School of Information Studies. All data will be stored with a coded participant identification number. Coded data will be made available for use in the analysis by the research team.
  - Coded data will also be made available for use in the analysis by the researchers. The collected coded dataset will be archived in the XXXXX, which is an institutional repository at the University of XXXX.

- **Alternatives**
  - There are no known alternatives available to you other than taking part in this study.

- **Voluntary Participation and Withdrawal**
  - Your participation in this study is entirely voluntary. You may choose not to take part in this study. If you decide to take part, you can change your mind later and withdraw from the study. You are free to not answer any questions or withdraw at any time. Your decision will not change any present or future relationships with the University of XXXX. If you are a current student taking class with the principal investigator, your refusal to take part in the study will not affect your grade or class standing. If you withdraw from the study, all information collected will be destroyed.
  - **Who do I contact with questions about this study?**
    - For more information about the study or the study procedures or treatments, or to withdraw from the study, contact:
    - **Who do I contact with questions about this study?**
      - The Institutional Review Board may ask your name, but all complaints are kept in confidence.
  - Filling out the survey indicates that I am at least eighteen years old and I am giving my informed consent to be a participant in this study.
Introduction: example 2

- **Welcome!** Thank you for agreeing to take part in this research effort designed to evaluate work satisfaction among faculty. We know that your time is valuable and we greatly appreciate your assistance with this project.

- **Purpose of the Study**
  
  The Collaborative on Academic Careers in Higher Education is a study designed to understand the experiences of full-time faculty at colleges and universities. In particular, this survey assesses faculty satisfaction with a broad range of topics specific to the academic workplace.

- **Informed Consent**
  
  We have obtained permission to distribute this survey to adult subjects from the Committee on the Use of Human Subjects (the Harvard University Institutional Review Board of record for this study) and from your institution.

- **Data Use**
  
  The institutional research office at your institution has requested record level data, believing that it may help them to identify any trouble spots with regard to faculty job satisfaction and enable them to respond with constructive revisions to policies and procedures. This means that they will receive survey responses with information that may indirectly identify some respondents. Your institutional official receiving the data has signed an agreement stating that only aggregate data with no cells smaller than five respondents will be shared with broader audiences at your institution, and that no individuals in a position to make or influence individual faculty personnel decisions will have access to the data.

- **Some data may be put to use by researchers at COACHE for the purposes of scholarly publication. COACHE may also share individually deidentified data with researchers from other institutions for the purposes of scholarly publication. Some aggregated, de-identified reports and presentations will be shared with institutional administrators and faculty groups seeking to improve their academic workplaces.

- **Questions or concerns about this study**
  
  The researchers for this study are XXXXX, who can be reached at XXXXX if you would like to talk to the research team, you think the research has harmed you, or you wish to withdraw from the study.

- **Instructions**
  
  The questionnaire was designed to be easy to complete. We estimate that the survey should take approximately 25 minutes. As you finish each page and proceed to the next, your data will be submitted for processing. You can back up and change your answers on the previous page of the questionnaire by using the “Back” button on the screen. Do not to use the “Back” button in your browser.

- **If you choose to suspend the survey to take a break, if your computer shuts down, or if you lose your Internet connection, you will be able to resume where you left off. Simply log back on using the link you received in the email we sent you. You’ll be offered a link at the top of this page that lets you resume where you left off, or you may start over by clicking the “Continue” button at the bottom of this page.

- **Rights of Participants**
  
  Your contribution is entirely voluntary and you have the right to discontinue the survey at any time. You also have the right to refuse to answer specific questions by checking or selecting “Decline to Answer.”

- **Eligibility**
  
  Full-time faculty at participating institutions.

- **Risks**
  
  There are no foreseeable risks associated with participation in this study.

- **Incentive**
  
  At the conclusion of this study, COACHE researchers will use the random number generator function in SPSS statistical package to identify five individuals from among all COACHE 2020 survey completers. If permitted by state law and campus policy, these five study participants will be contacted to receive an Apple Watch courtesy of COACHE. Odds of winning vary depending upon the number of completed surveys each year. However, if all faculty completed the survey in this year, the odds would be approximately 5 in 20,000. The five names will be identified by August 31 of the current year.

- **Eligibility**
  
  Full-time faculty at participating institutions.

- **Incentive**
  
  At the conclusion of this study, COACHE researchers will use the random number generator function in SPSS statistical package to identify five individuals from among all COACHE 2020 survey completers. If permitted by state law and campus policy, these five study participants will be contacted to receive an Apple Watch courtesy of COACHE. Odds of winning vary depending upon the number of completed surveys each year. However, if all faculty completed the survey in this year, the odds would be approximately 5 in 20,000. The five names will be identified by August 31 of the current year.

- **Questions or concerns about this study**
  
  The researchers for this study are XXXXX, who can be reached at XXXXX if you would like to talk to the research team, you think the research has harmed you, or you wish to withdraw from the study.

- **This research has been reviewed by the Committee on the Use of Human Subjects in Research at Harvard University. They can be reached at XXXXX if your questions, concerns, or complaints are not being answered by the research team; if you cannot reach the research team; if you want to talk to someone besides the research team; or if you have questions about your rights as a research participant.

Welcome! Thank you for agreeing to take part in this research effort designed to evaluate work satisfaction among faculty. We know that your time is valuable and we greatly appreciate your assistance with this project.

Purpose of the Study
The Collaborative on Academic Careers in Higher Education is a study designed to understand the experiences of full-time faculty at colleges and universities. In particular, this survey assesses faculty satisfaction with a broad range of topics specific to the academic workplace.

Informed Consent
We have obtained permission to distribute this survey to adult subjects from the Committee on the Use of Human Subjects (the Harvard University Institutional Review Board of record for this study) and from your institution.

Data Use
The institutional research office at your institution has requested record level data, believing that it may help them to identify any trouble spots with regard to faculty job satisfaction and enable them to
Thank you for your participation in our survey!

You must be 18 years of age to take this survey.

The survey includes 14 questions and should take 10-15 minutes to complete.

There are 10 multiple-choice and 4 qualitative text-entry questions.

You will be asked to include a link to your institutions privacy policy (if one exists).

After completion, you will be able to submit an email address (not linked to the survey answers) in order to receive an Amazon gift card.

The answers provided in this survey will be collected anonymously, and the software will not collect any personal or identifying information.

What will this survey be used for?

The information gathered will be used to write an article, with all identifying information removed and/or anonymized.

In the event of inclusion in a publication all identifying information will be securely deleted at the end of the project.

The Fine Print

The Institutional Review Board (IRB) at XXX University has approved this study (Ref #XXXX).

Your participation is completely voluntary.

The investigators listed below will be the only persons with direct access to the information provided in the Qualtrics survey software.

Please feel free to contact one of the investigators listed below with any concerns or questions.
• 1 sensitive question

• 2-3 heavy cognitive load questions
End

• Demographics

• Don't forget to thank respondent

• Deliver incentives
A few last details
Design of web-based surveys

- Use a progress bar and number your questions.
- Avoid excess color.
  - Bright colors make concentration difficult.
- Avoid unnecessary in-between pages or images
- Do not use background images if they make the text harder to read.
- Do not break up a question and its answers between pages.
- Avoid drop down lists that require scrolling or scrolling back and forth horizontally.
- Make sure the survey can be re-administered.
- [https://fiu.qualtrics.com](https://fiu.qualtrics.com)
Do you need to go through IRB?

- IRB approval is required when conducting “research” with “human subjects”

- Interaction includes communication or interpersonal contact between investigator and subject

- Private information includes information about behavior that occurs in a context in which an individual can reasonably expect that no observation or recording is taking place, and information that has been provided for specific purposes by an individual and that the individual can reasonably expect will not be made public (e.g., a medical record).

- Identifiable private information is private information for which the identity of the subject is or may readily be ascertained by the investigator or associated with the information.

Don't forget to pre-test!

Ask a minimum of 2 other people to review your survey
Why use Dataverse & how to start saving your data

- Allows data to be usable by others, increasing citation and impact
- A data management plan (DMP) is being required by federal and other funding agencies as well as journals

Saving your data
- File name should accurately represent what it is
- Avoid symbols *%@#$
- Data should be formatted by YYYYMMDD
- Use underscores ( _ ), not spaces, dashes, or hyphens
- Under 32 characters

Example of file name:
Survey_privacy_Rowan_20200329
