Day***StartUP FIU: sparking creativity, ingenuity, and technology transfer among faculty, students and entrepreneurs**

FIU's Innovation and Economic Development (IED) unit within the Office of Research and Economic Development (ORED) recently reached an agreement with Miami MedTech (MMT) to bring them to FIU's Modesto Maidique Campus (MMC). The first external startup company to co-locate at FIU, MMT is an innovation center for the medical device industry, providing leadership and resources to translate ideas about medical needs into commercially viable solutions. Located in the OE building, MMT employees plan to work closely with FIU faculty and students to develop its company.

These types of partnerships mark an exciting new role for FIU in Miami's innovation and entrepreneurship ecosystem as plans are well underway to launch StartUP FIU—a University-wide effort to stimulate and support collaboration among faculty, students and entrepreneurs towards the creation and development of local high impact companies. The FIU-MMT agreement is the beginning of an initiative to overcome a regional hurdle—the lack of comprehensive support to foster healthcare innovation through private/academic partnerships. The goal is to create the ideal incubator-type ecosystem in South Florida for inventive and entrepreneurial scientists, researchers and medical professionals to realize the commercial potential of their medical device ideas.

The FIU-MMT collaboration presents a great opportunity for economic development in Miami. The medical devices industry represents a \$500B market in which 80 percent of inventions originate from users. Founded by two entrepreneurs with vast experience in medical innovation, Dr. Pedro Martínez Clark, a board-certified interventional cardiologist, and Mr. Max Méndez, a medical device developer and former FIU student in mechanical engineering, MMT is currently developing a product that will provide 150,000 otherwise ineligible patients with access to a cardiovascular treatment device that is far less invasive than conventional approaches. MMT is also working with other local and international innovators, leveraging its unique clinical network in Latin America, to identify a strong portfolio of projects and products with tremendous potential to impact global healthcare.

MMT is just the first of what is expected to be many innovation opportunities available to early stage startups, FIU students and faculty under the auspices of StartUP FIU. Through StartUP FIU, the University is creating the infrastructure to coordinate ongoing efforts to advance its innovative technologies, launch companies and generate jobs for our community. To be located in an 8,000 sf incubator on the third floor of the MARC building, StartUP FIU will deliver signature programming, such as its 13-week program for teams of entrepreneurs that culminates in pitching to real investors, to support the formation of new technology companies. Companies co-locating at FIU will have access to FIU's facilities and resources, experts and entrepreneurs in residence, and collaboration with innovative and entrepreneurial faculty and students. Partnering with existing University resources such as the College of Business's Small Business Development Center, CARTA's Miami Beach Urban Studios, SCIS's TechStation, ORED's Technology Transfer and Commercialization unit, the College of Law's Small Business Clinic, the Honors College, and the College of Engineering and Computing, StartUP FIU will be a one-stop shop for entrepreneurs interested in starting their own businesses.

In another exciting development for the IED unit, Dr. Shekhar Bhansali, Dr. Yogeswaran Umasankar, and Mr. Peter Hernández recently received an Innovation Corps (I-Corps) award from the National Science Foundation (NSF) with support from FIU's Technology Management and Commercialization unit. Dr. Bhansali, chair of the Electrical and Computer Engineering Department, will be the Principal Investigator (the second time that he has served in this capacity on a NSF I-Corps); Dr. Umasankar, a postdoctoral associate, will be the Entrepreneurial Lead for the team; and Mr. Hernández, Director of FIU's Technology Management and Commercialization unit, will be the team's mentor. The team will be exploring the commercial feasibility of a device developed by Dr. Umasankar, a wearable transdermal alcohol sensor capable of continually monitoring the blood alcohol content of its wearer. The activities that this I-Corps team will focus on include development of a working prototype, determination of potential customer needs and requirements, and preparation to launch a company.
