

## **David Mayer-Foulkes**

**David Mayer-Foulkes** studied his BA and PhD in Mathematics at Oxford and UC Berkeley. Researcher at CIDE, Mexico, since 1991 and was director of the journal *Economia Mexicana* for eight years. He has visited the UCLA, Brown University and Kiel Institute Economics Departments, and conducted research for PAHO, UNDP and the Mexican Commission on Macroeconomics and Health, amongst others. His interests include long-term intergenerational health, nutrition and educational poverty traps, their impact on economic growth, and globalization. His multiple steady state models of endogenous technological change represent human and economic underdevelopment as a long-term, dynamic poverty trap and also explain the current global crisis.
