As far as art exhibition titles go, it would be hard to find a more fitting one for John Bailly’s paintings in the new show: “A Sense of Place.”

But for Bailly, who was born in the English town of Slough to a French father and American mother, then spent the first 10 years of his life in Long Island, Paris and Lyon, feeling a strong sense of attachment to one specific geographic location was something of an abstract notion.

Bailly, a professor in the Honors College and winner of the 2010 Faculty Award for Excellence in Teaching regularly exhibits his paintings at galleries across the country. His work was part of the sense of place exhibit at Carol Jazzar Contemporary Art in Miami.

He admits his artwork is very much influenced by his sense of identity.

“I’m really interested in place and identity as it relates to place and culture. I think that’s kind of how my life is,” Bailly said. “When I’m in France, I’m the American guy and when I’m in the U.S., I’m the French guy and so I don’t really belong anywhere so I kind of have to invent my own place.”

For most of his life, he has been the French guy, never more so than when he first moved to Miami with his parents.

“I was 10 years old and I could only read and write the word ‘cat’ in English,” Bailly said. “I could speak it because my mother always spoke English at home.”

Other words soon followed as Bailly became more acclimated to his new city, eventually attending Killian Senior High School.

It was not until his sophomore year of high school, however, when he began to get a sense, not of place, but of his passion. I’ve always loved to draw,” he said. “I would neglect other subjects just so I could paint and draw and make artwork.”

Professor John Bailly presents his painting Las Hermanas Islets to Jessica Lettsome, the events assistant at The Frost.

Natalia Bailly, his wife of 12 years, noticed this aspect of her husband’s personality from the onset.

“He was pretty much exactly how he is now when I met him,” Natalia Bailly said. “He is incredibly driven. He gets up at three, four in the morning to paint every day for weeks in a row. It’s almost like he doesn’t get tired.”

This single-minded focus led to his acceptance into the Performing and Visual Arts Center program, the predecessor to the New World School of the Arts, which allowed Bailly to take art classes at Miami-Dade College, a memorable experience.

Professor’s artistic side helps give him a sense of place

Guinea’s military chief, Nestor Thiam, declared a state of emergency following violence after a tense presidential election. His decree prohibits civilians from circulating on streets.

Students find place for religion on campus

A study by the Higher Education Research Institute showing that only 42 percent of students describe themselves as secure in their religious beliefs.

The study, which surveyed college students throughout the country, found that 81 percent of students said they attend religious services, while 23 percent said they were still seeking answers.

Whether a student can maintain religiosity in a University setting is argued upon the acquisition of new knowledge and the adherence to old dogmas.

Muslim Student Association president, Sarah Usman, elaborated on this belief, “I do believe such knowledge is capable of doing as mentioned because a lot of comprehensive information is presented to students as well as a wide range of specific courses to choose from.”

Yet, as the survey showed, the percentage of college students involved in religious practices is relatively high.

Panthers face Ragin’ Cajuns in road game

The Golden Panthers have an opportunity that has never been presented before: win at least two out of the next three games and become Sun Belt Conference champs.

If they can accomplish that, they will be up for a bowl bid for the first time ever as well.

GodDaddy.com Bowl officials were able to witness FIU’s commanding 52-35 victory over four-time defending champs.

If they can accomplish that, they will be up for a bowl bid for the first time ever as well.

“This is by far the biggest game ever in the program,” said theatre professor John Bailly, a professor in the Honors College and winner of the 2010 Faculty Award for Excellence in Teaching.

“It may be the last opportunity to impress bowl officials,” Bailly said.

“Hopefully it’s not the last road game,” said quarterback Wesley Carroll, who could still play a bowl game in December if his team can win the conference.

“May be the last opportunity to impress bowl officials. “This is by far the biggest game ever in the program,” said theatre professor John Bailly, a professor in the Honors College and winner of the 2010 Faculty Award for Excellence in Teaching.

The Golden Panthers will look to defeat the Louisiana-Lafayette Ragin’ Cajuns for the second year in a row and move one step closer to a Sun Belt Conference championship and bowl eligibility.
College students turn to religion for reducing stress and enlightenment

By Miraclen Simpson, associate professor for the Department of Physics.

By definition, belief without proof or evidence. These two methods of knowing cannot, therefore, be to do the same things. They are different tools with different purposes.

Whereas the general feeling amongst some of the prominent educated is that science can be used by some equally knowledgeable individuals in their stance regarding the possibility of faith and practical knowledge.

“Faith by definition is belief without proof or evidence. These two methods of knowing cannot, therefore, be to do the same things. They are different tools with different purposes.”

Bailly hopes to keep working on art

Marie Bailly, a French painter, is one of the most influential artists of her time. She is known for her unique style and her ability to combine realism and abstraction.

Bailly was born in France in 1920 and began her career as a painter in the 1940s. She quickly gained recognition for her innovative approach to art, which combined elements of surrealism and abstraction.

Bailly’s paintings often feature figures and landscapes that are both realistic and symbolic. Her works are characterized by their use of vibrant colors and bold, gestural lines.

Bailly’s work has been the subject of numerous exhibitions and publications. She has received numerous awards and honors throughout her career, including the Prix de Rome, the highest award given by the French government to a young artist.

Bailly is known for her dedication to her art and her commitment to pushing the boundaries of what is possible in painting. She continues to work today, producing new works that are both innovative and thought-provoking.

In conclusion, Bailly is a true artist who has made a significant contribution to the world of art. Her work continues to inspire and challenge viewers, and she will undoubtedly remain a prominent figure in the art world for many years to come.
Despite monumental win at Troy, there is more to be done

With Mario Cristobal receiving a water cooler bath treatment in the closing moments of a program-defining win against Sun Belt powerhouse Troy, one would have thought the Golden Panthers had won the conference and earned itself a bowl berth.

Not so fast.

Yes, the win was everything FIU had been trying to accomplish for years. Yes, it was a game in which numerous program records were shattered. Yes, it puts the Golden Panthers in prime position for its first conference championship.

But there are still a few more hurdles that this team needs to do before they reach the postseason. The team now has a tangible victory to point to outside of South Florida. And it would be easy for this team to get lost in the excitement and the hype.

The drubbing of Troy on the road raises the stakes and the expectations higher than they have ever been. The team now has a tangible victory to point to instead of a never-ending list of "moral victories" and close calls.

Now they face a new task: building off this newfound success.

There is little doubt that with the way FIU has performed, by all means with overreaching success, this rejuvenated football team can defeat each of their final three opponents, beginning with a road match up against the struggling Louisiana-Lafayette Ragin’ Cajuns.

Case in point: going for the win with a two-point conversion attempt in the final minutes instead of the extra point in a narrow loss to Florida Atlantic this past weekend.

The outcome this upcoming weekend in Lafayette is just as important as the final result in Troy this upcoming weekend.

For FIU, the final three games are all about whether or not this team is ready to accept the responsibility of being a top contender in this conference. It becomes a challenge as to whether or not this team is prepared to usher in a new era in a Sun Belt that appears to be on the rise.

Middle Tennessee has underperformed despite the return of dual-threat quarterback began an early season suspension. Troy… we all know what happened to them. And the rest of the conference has delved into a thick fog of mediocrity.

But here they stand in uncharted and unfamiliar territory for a program still looking for an identity and still looking to make a name for itself on a stage outside of South Florida.

And it would be easy for this team to get lost in the excitement and the hype.

**MEN’S BASKETBALL**

**Defense a key factor for Golden Panther scheme**

Before the season began, Isaiah Thomas said his approach with this team started with defense. He pointed at the fact that the team was disruptive in its ability to get steals last season, but the team was amongst the worst in the Sun Belt Conference in points allowed.

“You’re not going to shoot well every night,” Head Coach Isaiah Thomas said after the team’s win over Barry on Nov. 15. “But the thing you can always do well is defend, and when you’re not shooting it well and you’re not having a good offensive game, your defense can step up and help you. If your offense kicks in, where we had a few moments tonight where our offense kicked in, then you’re able to pull it away. Apparently, the team is showing signs of becoming the defensive group Thomas believes they can be. Through two games, the Panthers are allowing just 33.5 points per game on 40 percent shooting.

The team is averaging 10 steals a game and forcing nearly 20 turnovers in wins over Florida Memorial University and Barry. Granted, those two opponents play below the Division I level. FIU (2-0) did give up 82 points to DMU in the season opener last week.

“Coach is always telling us we can be a great defensive team when we want to be, and he’s always complaining about us not playing defense for 40 minutes,” FIU guard DeJuan Wright said. “So, when we came out, we just made up in our mind, everything starts defensively. We have enough good offensive players, but defense wins championships.”

After easily handling FMU on Nov. 12, the team let Barry drop 35 points in the first half before turning up the energy and holding them to 19 points in the second period. From that point, FIU’s offense began to turn in big plays as they separated themselves from the Buccaneers. Shakespeare at the Frost

TATHIANA PANDIANI
Contributing Writer

Arliss Ryan, author of The Confessions of Anne Shakespeare, held a lecture on her recently published book which focuses on her research into the life of William Shakespeare’s wife, Anne.

The event took place Nov. 15 at The Frost Art Museum. It was hosted by the Alternative Theater Festival, SGA, SPC-MMC, College of Architecture and the Arts, the Department of English and the Women’s Graduate Studies.

Ryan’s research leads her to believe that Anne Shakespeare, his wife, could have written some of the world’s greatest plays.

Ryan was an English major at the University of Michigan and later lived in New York and London. She said her interest in Anne Shakespeare grew from the unanimous opinions of Anne’s character by Shakespearean experts.

“Experts disagree on almost everything, but when it comes to Anne, they all agree that she was an older woman who forced [Shakespeare] to marry and ruined his life,” explained Ryan. “However, there is no factual evidence.”

Ryan insists that there is very little historical information on Anne, and the conclusions previously drawn are mainly hypothetical.

In preparation for this book, Ryan conducted extensive research and analysis of Shakespeare’s plays, sonnets and the historical context of his life, as well as travelling to England to study the story of Anne and William Shakespeare in the place where it played out.

Ryan’s visit to the University is due to faculty member Phillip Church, who ran across her novel in a local bookstore and thought she could have much to offer.

“After much emailing, we made this possible,” said Ryan at the lecture.

Her visit included a workshop with English and Theater majors, along with the lecture at the Frost and book signings.

Throughout the lecture, she explained some of the evidence that led her to believe Anne Shakespeare could possibly have written a piece such as Romeo and Juliet.

Ryan explained that, although woman in 16th century England would most likely not have had access to an upper level education, Anne could have learned to read and write by tutoring, or even with the help of her husband.

Surrounded by actors and playwrights, there is the possibility that she could have channeled her imagination, curiosity and natural talent into playwriting, just as her husband did.

However, because of the laws of the time, women could not publish their work explaining why her work would not be under William’s name.

“The understanding of female psychology [that Shakespeare’s plays have] are not in [the work of] any other writers of the time. So a woman could have written this. We like Mmeet’s work because it’s Mmeet. Then, for us who produce Shakespeare, the value of it is also dependent on who wrote it,” said Church during a Q&A after his lecture.

Immediately after the lecture, the audience was invited to a reception that focused on her research into the life of William Shakespeare’s wife, Anne.

Ryan’s main conclusion was, “True genius is not subject to a specific gender, ethnicity or place of birth,” so why shut down possibilities such as this one? The author said there might be a possibility of turning the novel into a play or even a movie in the future.

“This is my first visit to the University, but maybe not the last,” Ryan said after the lecture.

University should take advantage of new social outlets

In case you haven’t noticed, social media is kind of a big deal. On a university campus social media can be an indispensable tool to not only reaching the community but also engaging and even educating them.

Sadly, FIU follows a growing trend of universities that squander their social media presence. According to a study done by US News and World Report, universities utilize their social media to broadcast, not engage. They use their social media accounts as I am sure there are on average a few hundred, but in most cases they are not even adapted to almost every situation and every subject. A large screen with a stream of useless tweets, why not try something else? A large screen with a stream of valuable information, such as assignments, exam dates and links to class readings.

Social media can be a valuable asset both in and out of the classroom. Social media can even be a valuable asset to a professor. A professor can create a class-specific account they can use to post valuable information, such as assignments, exam dates and links to class readings.

Social media distributes raw information, inspires conversation and can be adapted to almost every situation and every subject. A large screen with a stream of tagged tweets can effectively crowd source a large class, streamlining the question and answer process and promoting conversation. I would like to see universities, like our own, encourage this behavior and education institutions on what this technology can do for them.

Modest Times is still not our time. Yet, in the era of NAFTA and tea-partiers and economic turmoil and Predator Drones, we can probably stand to listen to Chaplin’s message. Chaplin suggests that in the end all we can really do is laugh. And smile.

America lagging behind in high tech advancement

NEDA GHOMESHI
Staff Writer

We all know the global economy is suffering and, by all accounts, the recovery is going to be a slow and painful one for some nations, especially the United States. Many elements have contributed to this downturn and the blame is placed on different factors.

Some believe it was the money supply of easy money, consumer carelessness and deregulation that led to the crash. The truth is, we have had the worst financial crisis in the history of mankind, and we need to look at the future and decipher what can be done to help our economy avoid future downturns of this magnitude.

In order for the U.S. to remain globally competitive from an economic standpoint, we need to improve the skills of our workforce. We need to do more than education and reeducation, particularly in the area of technology. A significantly higher amount of money should be allocated to research and development of new technologies that will benefit our lives and the environment. As a nation, we need to remain a necessity in this global market.

Innovation is fueled by research, which requires funding from private organizations as well as government support. We are falling behind in the development of new technologies and the U.S. government should establish more research funding in this area. It should also provide large grants to universities to encourage them to dedicate more of their resources to technological developments.

Many of the technological advances that we have enjoyed over the years have come from government organizations such as the Defense Advanced Research Projects Agency and N.A.S.A. I believe these agencies should be strengthened, not just because of the products they produce, but rather for their discoveries. Their discoveries and inventions have led to the creation of major businesses and all the location-based services that are now available.

This country was founded on innovation and we can become dominant again if we put ourselves back on that track to creation. With cooperation between private government and charitable organizations, we should be able to dedicate more of our resources to developing new technologies with education, which will lead to the creation of jobs and will also spread prosperity.

During the 20th century, the U.S. was the leader of the industrialized world in the development of cutting-edge technologies. Now, we are falling behind at an alarming rate and other nations are taking our place.

According to the World Intellectual Property Organization, “U.S. technology companies, like Motorola and Hewlett-Packard, made sizeable cuts to their research and development spending in 2009, after the outbreak of the global financial crisis. At the same time, many Chinese technology companies increased their R&D budgets by 25 to 45 percent.” At a time when private companies are cutting on research and development spending, the U.S. government needs to step in to prevent a total loss of brainpower.

Unfortunately, with the new Republican platform, it seems that the government will be allocating less money for research and development.

According to a New York Times article published on Nov. 3, 2010, “Research and development at nonmilitary agencies, including those that sponsor science and health research, would fall 12.3 percent, to $57.8 billion.” If money for research and development continues to diminish, the U.S. will not have the capability to succeed in this competitive global market.

The future of the U.S. is at peril and the window of opportunity will not remain open. If we don’t focus our attention on education and technological development, other countries will do it for us.

Open campus policy a major liability

JASMYN ELLIOTT
Asst. Opinion Editor

The University is constantly touting the importance of remaining safe on campus grounds. However, the open campus layout seems to contradict this message, as it gives such easy access to outsiders.

Every so often, I worry about how simple it is for anyone from the street to gain access to the campus. Granted, such access to outsiders. It may seem like a hassle, but if one sneaks past security should be punished. Furthermore, security should reserve the right to ask students to identify themselves, as all students usually keep their Panther I.D. card on their person. Even if the students don’t have an I.D., they can simply prove their identity by logging into their Panthershot page. Barring that, their names are in a database and they can be looked up. Moreover, individuals who sneak past security should be punished accordingly.

These solutions may seem overly harsh and unnecessary, however, as members of the University we have a right to be aware of the safety and security that we are entitled to. In the event the University does anything that might be considered unnecessary or overly harsh, we should have a right to petition the University’s administration.

“I think that our location would make it difficult to implement something like that. It’s just more work. We have enough problems and issues to deal with; so we have enough internal issues before we bring that in.” -Arielle Trujillo, Senior, Psychology

“Yes, we definitely should. Anyone can walk in and you never know who comes in looking for any trouble.” -Jorge Vera, Sophomore, Business Management

“There have been a lot of computer thefts and I would assume that would be due to people outside of the University because they can get away and no one knows them. It would make more sense to move away from the open campus policy. I don’t know how it would happen, but I think it would be in our best interests.” -Alex Soto, Freshman, Statistics

Send Us Your Letters

Get a problem with parking? Want to go back to the dorms? Do you just have something on your chest? Send your thoughts to opinion@fiusm.com or drop by our offices at either GC 210 or WR 124. With a little luck, we may include your name, major and year.

PERSPECTIVES

Should FIU cease being an open campus for security reasons?

“If money for research and development continues to diminish, the U.S. will not have the capability to succeed in this competitive global market. The future of the U.S. is at peril and the window of opportunity will not remain open. If we don’t focus our attention on education and technological development, other countries will do it for us.”
12-hour event will raise money for the poor Haiti

Food for the Poor, in partnership with several student organizations, will be on campus to raise money to help Haiti’s economy.

The University and the Student Government Council at Biscayne Bay Campus will present “All Nighter for the Poor,” a night of food, music, games, and more on Nov. 19 from 7 p.m. to 7 a.m. The fundraising event’s goal is to raise $8,450 in order to build a tilapia pond in Haiti.

Tilapia was chosen for the pond because they are hardy fish that survive under less than ideal conditions. They breathe from the surface if there is not enough oxygen in the water and they are ready for harvesting after only four to six months.

Food for the Poor, the largest international relief and development organization in the United States, created “All Nighter for the Poor.”

The organization has been helping the poor of the Caribbean and Latin America through sustainable projects for 28 years, according to its website foodforthepoor.org.

The clubs and organizations there will be doing their part to support the cause and raise money, Kaplan said.

Bay Vista Housing, Black Student Union, Student Alumni Association, Student Organizations Council, Student Programming Council, Students for the Poor, Haitian Student Organization, Catholic Student Union, and Hands on Miami-Haiti are some of the organizations that will be present.

According to Shana Kaplan, SGC-BBC comptroller who chairs this event, the University and SGC-BBC have taken the initiative to create one night for students and the nearby community to unite for a good cause.

With the money earned from the fundraiser, The Food For All Organization and the Haitian community are able to build the pond, provide the tilapia larvae, build an irrigation system, as well as clean water wells. With the ability to farm fish, the village people can then sell the fish to other villages and provide food for themselves. This creates a domino effect and a healthy and sustainable economy.

Kaplan added the tilapia pond will help build a sustainable economy in the villages of Haiti.

“By creating a sustainable economy, it ensures more financial security and confidence to the people and villages of Haiti by developing an ongoing source of income,” Kaplan said.

By visiting the website www.foodforthepoor.org, students can encourage their friends and family to donate to the development project. By clicking on the “FLU” link on the site, students can start a fundraising team, donate money, and even join a team already created. 96 cents of every dollar will go directly to the project.

“I love the idea of people coming together for one cause,” Kaplan added.

The night’s opening ceremony will include three keynote speakers: Andre Pierre, mayor of North Miami; Angel Aloma, executive director of Food for the Poor.

“I will speaking about my trip to Haiti, and also about what we can do to help Haiti in general,” said Aloma, who visited Haiti prior to the earthquake in 2009.

Aloma explained the organization works in 17 countries in the Caribbean, in which they aim for low-cost sustainability.

“We want to focus not only on feeding the people, but teaching them to feed themselves,” Aloma said.

The event will also include recitals from the University’s own SPEAK Poet club and a dance performance by the Haitian IBO Club.

The activities offered throughout the night will include live music from the Haitian jazz and rock band Emmett Addi & RaRa Rock, kayaking on the bay, laser tag, ball toss games, video games, dance lessons, an open-mic for spoken word, yoga, and a movie showing in the Mary Ann Wolfe Theatre.

BBC will also host its first ever midnight pool party with a DJ.

Students must make sure to contact the Recreation Center at 305-919-5359 to pre-register for kayaking and laser tag. There are limited spots available.

Different clubs will host tables to raise money for the event, by selling crafts and charging for the activities available.
