Blue Ribbon Task Force recommends system reforms

MELHOR LEONOR
News Director

In a report finalized last week, Gov. Rick Scott’s Blue Ribbon Task Force on State Higher Education Reform may have just outlined the future of the State University System.

The task force, created by Scott in May through Executive Order 12-04, was commissioned to provide recommendations on the state’s higher-education system, with attention to the interaction between the Board of Governors and the individual universities, according to a release by the Governor’s Office.

With the report already before Scott, the 12 state universities are now looking at 11 different recommendations to reform higher education in the state in the areas of accountability, funding and governance.

The accountability recommendations reflect the increasing pressure on the system to measure universities’ performance through key metrics. Under the Accountability section, the task force recommends the BOG “continue to enhance its metrics-based accountability framework as a management and decision-making tool...” consistent with Scott’s emphases.

“I agree that there should be accountability, that decisions should be based on data,” said Douglas Wartzok, University provost. “Universities within the State University System have different missions, and...the universities have to be funded adequately to meet agreed upon goals.”

As outlined by the report, these include the percentage of graduates employed or continuing education.

TEDxFIU inspires, motivates and educates

Tickets were sold out for the TEDxFIU event on Thursday, Nov. 15. Students gathered and listened to lectures about legal death, natural disasters, the future of online education and other topics. Ileana Rodriguez, Ximena Prugue and Elizabeth Price Foley were some of the speakers at the event.

“TED is an acronym, platform and global phenomenon,” said the master of ceremonies, Alberto Padron as he welcomed guests.

Narrowed down from 60 submissions, eight people from the University were selected to speak at this event entitled “Beyond the World You Know.”

From space exploration to legal death to overcoming a disability, each of the eight speakers brought something different to the table.

Stephanie Alteta, senior in marketing at the University, said her favorite speaker was student philanthropist Ximena Prugue.

After discussing her journey to help people in India, Prugue received a standing ovation and ended her discussion on energy poverty.

“Sometimes to achieve extraordinary things, you have to be a little crazy,” Prugue said.

Raymond Pereira, a junior majoring in advertising, found Prugue to be very inspirational.

“One of my philosophies is to take everything that you learn here and you might have to take that knowledge and go somewhere else to help somebody else out or help yourself out,” Pereira said.

Christiana Serle, graduate student in public health, said she liked all of the talks and “thought they were all very impactful and interesting in their own unique way.”

Randa Ellmalik, junior majoring in public relations, shared what she got out of TEDxFIU.

“The talks were just saying that it’s up to you to change stuff and to get educated and go out and do something,” Ellmalik said. “It’s one thing to think about it, but it’s another thing to go out and be proactive and make a difference.”

HELPING OUT ISRAEL

Students gather support and awareness for Israel. Over the past week, residents of Israel have been victims of Hamas rocket missile attacks, putting millions of citizens in bomb shelters.
The Beacon – Monday, November 19, 2012

No compromise in contract talks between union and F&I

ASHLEY MARTINEZ
Staff Writer

The University and the union that represents support staff at the University could not come to an agreement for a new contract during the collective bargaining session on Tuesday, Nov. 13. The American Federation of State, County and Municipal Employees Local 3346, and the University have been trying to negotiate a new contract since July 2012. AFSCME represents support staff, such as mechanics, electricians, painters, plumbers, etc.

On Tuesday, AFSCME declared impasse with the University administration. An impasse occurs when the parties fail to reach an agreement. Following an impasse declaration, a process of arbitration would begin.

The arbitration process could last six to eight months and will end in a decision by a magistrate that would be accepted as final by both parties.

The University and AFSCME were in talks over an extended wage package for support staff in Tuesday’s session. “An even though we meet, it doesn’t give us any leverage,” said AFSCME representative and head bargainer, Madeline Gonzalez. “We’ve been doing this far too long.”

The University proposed a wage package that would give support staff a 2.5 percent wage increase during the first year of the contract, a 2 percent increase the second year and a 1 percent increase during the third year, with the condition that AFSCME accepts a new three-year contract.

“The (union) bargaining committee has communicated that they feel the wage proposal is good,” Gonzalez said. “The union is proposing a lower pay raise in exchange for just cause. We are accepting your wage proposal, but not your package.”

Just cause means the employer must have a reason to fire an employee. It is a form of job security that allows the employee to appeal the decision to an arbitrator who evaluates whether or not the employer’s action was justified with the employer bearing the burden of proof.

“The Board of Trustees doesn’t want ‘just cause,’” said Elizabeth Marston, associate general counsel representing the University. “The wage package is more than generous.”

In the negotiations over just cause, both the University and AFSCME remained grounded in their positions.

The University does not want to add just cause to the contract, and AFSCME does not want the contract without just cause. Some affected employees present at the meeting saw the proposal as more pragmatic.

“The employees are disillusioned because they haven’t seen results from the union,” said Carlos Fernandez, a mechanic who has worked at the University for several years. “We are more than happy to accept the contract.”

Fernandez brought with him various employee signatures he obtained during his lunch breaks, petitioning to put the contract and wage package to an employee vote.

“The raises are important to us,” Fernandez said. “I only know three cases in which support staff were fired and all three times the University was right in terminating them. They definitely fire someone unless they are lazy.”

Gonzalez acknowledged Fernandez’s plea, but insists they continue to fight for the just cause clause.

“We sent out a survey to employees regarding just cause, and the responses showed that at least 70 percent of them wanted the union to keep fighting for it,” Gonzalez said. “We also understand the money is very important.”

At the end of the session, Gonzalez declared impasse on behalf of the union, saying that throughout the process, the union would consider putting the contract to a vote.

Marston addressed the potential fiscal cliff that, if unresolved by Congress, could raise taxes and spending cuts. If that were to happen, by the time the impasse comes to an end, the contract may not include a raise at all.

“Our wage package is contingent on [the union] accepting the entire thing,” Marston said. “We’re getting nowhere. We’ve done the best we can. Our position is clear.”

Due to the Lakeview incident, Student were granted three days of free laundry. Everyone affected is taking advantage and having all machines running strong.

Task Force report before Rick Scott

REPORT, PAGE 1

bachelor’s degrees in areas of strategic emphasis, salary of graduates, cost per graduate and cost to graduates.

According to Wartzok, the University ranks third in the SUS in terms of the percentage of bachelor’s degree recipients who are employed full-time in the year after graduation.

Wartzok said the University ranks third lowest in the SUS in terms of cost per grad- uate, spending an average of $36,848 for each degree produced. The average tuition and fees cost to a student at the University is $6,825 over four years, minus Pell grants and other financial aid awards that students don’t have to pay back.

The report also highlights reforms in terms of funding for the SUS, which suffered a $300 million non-recurrent budget cut last year. In the report, the task force recommends the state maintain a full-time resident, undergrad- uate tuition option of approximately $15,000 for a bache- lor’s degree. Currently, F&I is at approximately $25,000 per bachelor’s degree.

Also, in funding recommenda- tions is the proposal for a “differentiated tuition model” that would prevent tuition increases in a set of degrees established by the legislature.

Currently, there are 111 programs in science, tech- nology, engineering and math, 28 programs in global- ization, 21 in health professions, 19 in education-crit- ical fields (math and science) and nine programs in secu- rity and emergency services. These degrees are referred to as “high-skill, high-wage, high-demand” and are programs deemed as stra- tegic areas of emphasis for the state.

“I think there needs to be more thought given to whether we want greater state subsci- dization of high-wage jobs,” Wartzok said. “This would be a major change from the thinking across the country where tuition differential among programs is consid- ered, the lower tuition is often associated with degrees such as education that serve a public good but are not high-wage rather than lower tuition for degrees in fields where the graduates will receive high wages and can more easily pay off any associated loans.”

Josh Numa, a senior in business administration, said the recommendation would be a “direct incentive.”

“I think it’s a great idea because of what they are trying to build in Florida. They want to create a new industry. It’s not fair to everyone, but I see what [Scott] is trying to do,” Numa said. “People want business and to generate money.”

According to Wartzok, Florida ranks 51 out of 50 states and the District of Columbia in the ratio of STEM jobs available for graduate study.

“Many of our STEM grad- uates have to leave Florida to find jobs,” Wartzok said, adding that 47 percent of the University’s STEM gradu- ates at the bachelor’s level are employed full-time in Florida within a year of grad- uation with an average salary of $41,345.

The report also adds that the BOG will use perfor- mance in this area to allocate additional funding.

“The assumption would be that state support will...allow for resident student tuition in

legislatively-determined high- skill, high-wage, high-de- mand bachelor’s degree programs to remain lower, by comparison, than resi- dent student tuition in other non-STEM bachelor’s degree programs,” according to the report.

Also in the report is the creation of “Preamendment Universities.” This designa- tion would reward institu- tions aligned with particular state performance measures with flexibility in tuition and decreased regulation.

The task force report also outlines the need for the BOG to develop system-wide and institution-specific metrics. The report recommends that state institutions align annual and strategic plans with BOG strategic goals.

Additionally, other recom- mendations would give the BOG control over budgets and direct involvement in the search and appointment of university presidents.

The board also recom- mends further research be conducted to determine the impact that the other recom- mendations would have on the Florida Bright Futures and Florida Pre-Paid programs.

Breaking the mold on higher education

DIANA ANAYA
Contributing Writer

From elementary school to college we’re placed in a bubble in which our friends will always be with us and all we need to worry about is getting that degree. Real world issues and problems are irrelevant — what really matters is memorizing that chapter, spewing it out onto a paper, and then forgetting everything you studied.

It’s a commonly accepted idea that the United States’ education system is lacking in almost all respects. To be specific, the state of Florida has consistently ranked low when compared to the other states in education. But what’s to blame — the budget cuts, the paltry wages professors make or the economic state of the country as a whole?

We can’t fix the economy in a day, and all the picking in the world won’t make the Florida government give education the money it deserves.

However, all hope is not lost. While we can’t make sweeping changes, we have to power to make small ones. As a start, we can address the lecture format.

The lecture format — the platform by which I’ve mostly seen professors teaching — is one of the least effective. It’s essentially standing in front of a classroom and parroting back information from the textbook or on a PowerPoint (which they often have behind them) with extra facts here or there. The students aren’t really taking in this information, but engaging in an almost mechanical movement of the hand, taking down every word without giving it a single thought.

In some classes, lectures may be considered necessary; but for many, they’re not. Socrates used the Socratic Method, in which students would be asked questions and be prompted to debate with one another. This kind of teaching requires close attention to the material, critical thinking, and an ability to think on the spot, which can be immensely helpful in any career.

In the real world people must ask and answer questions, defending arguments as common as why you deserve a raise.

Of course this method requires the students to participate and someone always needs to be the first to raise their hand in order to “break the ice,” and once the conversation begins it can be hard to watch it. Which brings me to my next point: the bubble. The material of many classes is frequently considered challenging not only because of the level of critical thinking or memorization it requires, but because it’s static. All this information is locked away in a time capsule that has nothing to do with current events.

This is another point Socrates made, which is to bring present day issues into the classroom. Students would be far more interested in the material if professors made a habit of relating it to contemporary issues. I realize all of these changes require an obscene amount of work by the professor, who may not have the time or energy to do so because of the many classes they teach.

Not to mention why someone would invest so much care into a class that seems to be a murderous amount of work.

Bullying important part of University’s policy

YANAISSIS COLLAZO Contributing Writer

160,000 students will stay home today because of fear of being bullied, according to stompoutbullying.org. Bullying occurs in a variety of ways – physical, emotional, relational or online. Among the types of bullying, students also experience hazing.

According to HazingPrevention.org, 55 percent of college students experience hazing. The University’s Victims Advocacy Center and Student Conduct and Conflict Resolution take the cause seriously.

According to the University policy statement, any form of violence toward an employee against another employee, student, vendor or visitor to the University will be cause for disciplinary action up and including dismissal and may result in criminal prosecution, if federal, state, or local laws are violated.

Kirsten A. Kawczynski, director of Student Conduct and Conflict Resolution assures if you break the rules there is a series of steps to take after the occurrence is reported. Starting from an investigation and ending with the University’s Student Conduct process and disciplinary sanctions.

“Education on what hazing is and its negative effects is how it’s done,” said Kawczynski, when it comes to preventing hazing.

She said it also helps “to hold organizations [accountable] for hazing and show it’s not appropriate in the University.”

Hazing is associated with organizations, clubs and even teams. Ensuring it does not happen on campus, the Office of Student Conduct and Conflict Resolution ensures hazing prevention and sanctioned workshops to organizations. More specifically, the workshops are for the victims.

“If you report the incident, it actually increases,” said Kawczynski. “Alerting them of the situation instead of the key to stopping the issue.”

Similarly Kawczynski’s views on hazing, Alexis Hamilton Folks, assistant director of Sorority and Fraternity Life, already knew she didn’t want to join a sorority if it meant being talked down to in a demeaning way and forced to do things against her will.

However, after deciding to join a sorority, she realized it was not an issue here at FIU. Since Order of Omega and Campus Life consecutively plan a hazing prevention week annually, the outcome of it occurring is minimum.

“We are here to be educated… not be exploited to bad practice,” said Folks. “It’s against the law, a federal offense.”

In addition to hazing, bullying in general is another concern at the University. Many students who have been bullied in the past, or still are bullied, go to seek guidance at the Victims Advocacy Center.

Jonathan Batson, president at FIU’s Chapter of Minority Association of Premedical Students has been bullied in the past.

“From a personal experience in ninth and 10th grade, I was bullied,” said Batson, who was bullied through an online video on YouTube. “Sometimes it felt like it would never end. Now as a college student, I want to help other victims know that it gets better.”

According to StompOutBullying.org, one out of four teens are bullied.

“It is wrong that somebody is treated unfairly and unjust due to them expressing who they are as a person,” said Batson. “It is wrong.”

To prevent bullying, students are asked to report the incident before it gets out of hand, and most importantly, do not bully back.

To speak to someone at the Victims Advocacy Center, contact the 24-hour hotline at 305-448-3600.

‘Skyfall’ brings out the best in Daniel Craig’s Bond

To hell with dignity,” M, the head of the Secret Intelligence Service, says in “Skyfall,” the latest and arguably greatest Daniel Craig entry in the James Bond series. “I’ll leave when the job’s done.”

“Skyfall” doesn’t just keep its dignity, it breathes new life into a series that is now fifty years old. Director Sam Mendes and writer John Logan have reminded everyone that Bond has a long way to go before he runs his course, and what great news that is. Betrayal and a lack of trust run rampant in “Skyfall” as Bond recovers from a near-death experience brought on by M.

When someone from M’s dark past returns to exact vengeance, targeting MI6 and all of its personnel, 007 is specially assigned to discover and eliminate the threat.

After the disappointing “Quantum of Solace,” it looked as though Bond was headed down a track in which he was entirely stripped of everything that made him more than just a spy with a license to kill.

“Skyfall” instead chooses to turn back time and deliver Bond at his most human, allowing audiences to see him at his best and worst. Rather than continuing Bond on the trajectory to becoming an action machine, “Skyfall” brings back the silly charm of vintage days. There’s a fresh introduction of Eve Moneypenny and Q, played rather well by Naomie Harris and Ben Whishaw respectively, plenty of humor written into a rather dark script and enough references to the Bond of old to keep most fans happy.

The film is gorgeous, courtesy of Roger Deakins, director of photography. His work is always top tier, but “Skyfall” features some amazing uses of shadows and lighting. A frequent collaborator with Mendes, it’s no surprise that Deakins is allowed to do what he does best, notably in the riveting final act.

John Logan, who rewrote much of Neal Purvis and Robert Wade’s original script, delivers a tight screenplay that brings out the best of both cast and crew.

Audiences will likely notice the influence from Nolan’s Batman trilogy, but that should come as no surprise as plenty of Bond films draw from the popular films of their time.

The decision to humanize Bond works in Craig’s favor, showing more range than the typical action star, especially in his interactions with co-star Judi Dench.

In her seventh appearance as M, Dench delivers her biggest and best performance and the series and that’s something to be thankful for considering the film’s story heavily involves her.

Javier Bardem, already well known as the villain of “No Country for Old Men,” is one of the most valuable players of “Skyfall” as the vengeful and unbalanced Raoul Silva. His late introduction to the film makes for one of the best scenes and his banter with Bond may leave some conservative viewers in shock.

“Skyfall” isn’t the best Bond film, but it certainly turns out to be a memorable one that will open the door to hundreds of possibilities for the series over the next few years.

Javier Barquin is a junior FIU English major. For the past year and a half, he has written more than 80 movie reviews for YAM-Magazine, and is pursuing a certificate in Film Studies at the University.

Dismal season ends with blowout loss in SBC Tournament

JONATHAN JACOBSKIND
Staff Writer

Before the FIU volleyball team took the court for the very first game of the 2012 season on Aug. 24, the unthinkable happened. All Sun Belt teams had been ranked in the top 12 of the national rankings, and the FIU Panthers were no different.然而, on the first day of the season, the crew was ranked in the top 12. However, according to some strange rule, the Panthers were ranked in the seventh seed, which would have paved the road to the Sun Belt Finals.

"When we made it to the conference tournament, we thought we had the seventh seed and start on opposite brackets than Western Kentucky and we said you know what, we can make it all the way to the finals again," Theroulde said. However, according to some strange rule, the coaches of the league voted on the first game which held out for the season. It is uncertain whether Theroulde will take a medical redshirt to return for a fifth season.

Jessica Egan (left) and Jovana Bjelica (right) missed nearly the entire season. Egan played in only six games this year after having mono and Bjelica broke a bone in her hand before the first game which held out for the season. It is uncertain whether Bjelica will take a medical redshirt to return for a fifth season.

The FIU women's basketball team will head to Bowling Green, Ky., has never looked so good. No, really, it doesn't look so good.

The FIU women's basketball team will head to Bowling Green to face off against the Western Kentucky Hilltoppers, Coley averaged 34 points and 8.5 rebounds per game. Coley also tied a career high in points, with a 36-point outing in Miami. With that outstanding performance against WKU, the squad is coming off a lopsided, 69-45, loss to the squad is coming off a lopsided, 69-45, loss. However, according to some strange rule, the squad was down by 45 points, and Russo jokingly said, "It was the worst feeling coming to practice and being told you had another player out for the match or the rest of the season." Russo said. "We had four scholarship athletes out for the year from the 12 total scholars- ship athletes we have. Out of the remaining eight, we had four playing with severe injuries." Trevor Theroulde's head coaching debut year was just as painful as the Panthers matched their entire 2011 loss total in just over the first month of the season.

Panthers open Sun Belt play on the road at Western Kentucky

RUBEN PALACIOS
Staff Writer

A trip to Bowling Green, Ky., has never looked so good. No, really, it doesn’t look so good.

The FIU women's basketball team will head to Bowling Green to face off against the Western Kentucky Hilltoppers on Nov. 19. The Panthers will have to be aggressive on the floor and stay tough at all times, because now they realize that we are not really good yet," Russo said.

"I never want to have to start the conference season going to Western Kentucky and having to play on their home court," Head Coach Cindy Russo said. "I would never have wanted to do that in my whole life, but I don’t make the schedules."

The matchup against WKU pairs the two East Division rivals against each other for their 32nd all-time meeting. WKU (5-0) leads the all-time series with 23 wins and only eight losses. Despite their history, FIU (1-1) enjoyed recent success against their foe, winning three out of the last four matchups.

The matchup against WKU will have to be aggressive. However, according to some strange rule, the Panthers are ranked in the seventh seed, which would have paved the road to the Sun Belt Finals.

"When we made it to the conference tournament, we thought we had the seventh seed and start on opposite brackets than Western Kentucky and we said you know what, we can make it all the way to the finals again," Theroulde said. However, according to some strange rule, the coaches of the league voted on the first game which held out for the season. It is uncertain whether Theroulde will take a medical redshirt to return for a fifth season.

The Panthers were able to sneak into the tournament as the eighth seed. However, based on head to head matchups, Head Coach Theroulde believed the Panthers deserved the seventh seed, which would have paved the road to the Sun Belt Finals.

"When we made it to the conference tournament, we thought we had the seventh seed and start on opposite brackets than Western Kentucky and we said you know what, we can make it all the way to the finals again," Theroulde said. However, according to some strange rule, the coaches of the league voted on the first game which held out for the season. It is uncertain whether Theroulde will take a medical redshirt to return for a fifth season.

"This is a good thing to happen in the beginning of the year, because now they realize that we are not really good yet," Russo said.

Russo recalls the first time her team was nationally ranked back in the '93-94 season. Her team played an away game at Texas Tech, which happened to be the second ranked team in the country at the time. At halftime, the squad was down by 45 points, and Russo jokingly suggested during her halftime speech that the team just skip the second half and catch an early flight back to Miami. The team came out strong in the second half, though they still lost the game. They won the half by 25 points.

"They came out and they played, so that was the beginning of them realizing that we are there too," Russo said.

"They realized how tough it’s going to be if they want to be a good team in the nation and right now this team has not committed to that," Russo said.

Coley, the Preseason Sun Belt Player of The Year, will have to adjust her game in order to help her team garner success against upcoming conference opponents.

"Jerica is going to have to learn to distribute a little bit more. She's going to have to learn to get on the weak side more, and we are going to have to learn to find her that way," Russo said.

"It was the worst feeling coming to practice and being told you had another player out for the match or the rest of the season," Russo said. "We had four scholarship athletes out for the year from the 12 total scholarship athletes we have. Out of the remaining eight, we had four playing with severe injuries." Trevor Theroulde's head coaching debut year was just as painful as the Panthers matched their entire 2011 loss total in just over the first month of the season.

The laundry list of injuries did not stop there as senior setter Renee Forde played the majority of the year with a strained abdomi- nal muscle, as did freshman Ashlee Hodgskin with back and ankle injuries.

Among the five, more than 100 combined missed games. With an injury depleted team, new faces emerged as the squad’s top scorers. Freshmen such as Lucia Castro, Gloria Leorini and Ashlee Hodgskin became frequent starters in the line up. Russo says, "When we made it to the conference tournament, we thought we had the seventh seed and start on opposite brackets than Western Kentucky and we said you know what, we can make it all the way to the finals again," Theroulde said. However, according to some strange rule, the coaches of the league voted on the first game which held out for the season. It is uncertain whether Theroulde will take a medical redshirt to return for a fifth season.

Scholarship athletes face the harsh reality that their “free ride” can be taken from them at any time. For some, it’s a motivator that pushes them beyond their limits everyday.

Just ask swimmer Marina Ribi, a senior transfer student from Switzerland.

Before coming to FIU, this year Ribi was expecting to return to Tennessee for her senior campaign. But that all changed when two weeks into the summer, her coach at Tennessee for her senior campaign, Matt Kedrich, informed her that she wouldn’t be receiving scholarship funding.

“I was devastated, truly devastated. For about a day or two I felt like nobody, I didn’t know who to trust or where to turn,” Ribi said.

After receiving this news, Ribi contemplated what to do and decided this wouldn’t determine her future. She was going to keep training in the US to achieve her goals through another path. She contacted Coach Randy Homer, decided to come to FIU, and the rest is history.

The native of Schaffhausen, Switzerland, has burst onto the FIU swimming scene in a big way helping lead the squad to its highest national ranking ever, 15th.

She has five overall wins this season and set a new FIU record in the 200 Butterfly against Florida State and Florida Atlantic.

Ribi’s mother was also an skilled swimmer and got her into the pool at the age of seven. By the time she was nine, Ribi had joined a club team in Switzerland and the foundations of her future triumphs would be laid. Her family and friends were vital to the return of her career, always making sure she enjoyed her childhood.

“They never put any pressure on me and always told me to do what I loved and not because they wanted me to,” Ribi said.

Ribi has always been very self motivated and after her first Swiss National Championships, at the age of 13 years old, she started training harder and won her first top place medal at the next year’s Swiss Championships.

“I won my first medal at the Swiss Championships when I was 13, and I realized I could become a lot faster and that’s when I really started dreaming about future accomplishments and goals,” Ribi said.

Ribi attended both the European Championships and World Championships twice representing her home country of Switzerland. She broke her first Swiss national record, the 200 IM, in 2009 at the World Championships in Rome, Italy.

“There are still a lot of things I would like to accomplish, but I could never imagined everything I have done so far and I am enjoying every moment,” Ribi said.

While expectations were high for her at the beginning of the season there was a lot of mystery surrounding her and what she would actually accomplish.

But she has far surpassed every one’s expectations for this year and broke her first FIU record in only her second meet as a Panther.

Ribi is not one to shy away from stating her expectations and has her eyes set on re-taking that record and many others.

“When I finish out my career I would like to be considered the best Swiss female swimmer ever, but I still have a lot of work to get there,” Ribi said.

Ribi loves the weather in Miami and enjoys going to the movies and hanging out with her friends. Her favorite movies are “Star Wars” and the “The Lord of the Rings” trilogy, but she also enjoys the Harry Potter books.

After losing her scholarship, Ribi has rebounded and looks poised to reach her goals.

“Now looking back, losing my scholarship was the best thing that could have happened because I am happier now,” Ribi said. “It made me stronger and I can appreciate the good days better now.”

VOLLEYBALL, PAGE 6 season. Theroulde summed up the 2012 season in one word: unpredictable.

“From day to day, I did not know what team I was going to have on the court,” Theroulde said. “We came from having championship aspirations to barely making the conference tournament.”

With the constant shifting and switches to the line up, Theroulde could never find the team cohesion and consistent play he wanted. Despite showing a slight glimpse of improvement towards the latter part of the season, the inconsistency and lack of experience for the team resulted in one of the worst statistical seasons in program history.

FIU remained at the bottom of the Sun Belt cellar in most statistical categories as they were ninth in hitting percentage with a dismal .154 kill per set average. They also finished 10th in kills in the Sun Belt, averaging just 11.29 per set and eighth in digs. The sole bright spot was on the defensive end as they lead the Sun Belt with 2.64 blocks per set.

Despite all the negativity surrounding the 2012 squad, Forde and the rest of the seniors including Bijelica, Marija Praz and Ryanne Milligan, will cherish their tenure playing for the blue and gold.

“It really hit me when I was subbing out for the last time and I was like, ‘wow, that was the final time I was going to play on FIU’s court’,” a teary eyed Forde said about her final home game on Nov.10. “It was very emotional and I loved my time here but at the same time I did my job and it’s time to move on.”

Although their Sun Belt Championship aspirations are over, the Panthers still have one last regular season matchup on the road against in-state foe Central Florida. First serve is slated for 7:00 p.m. on Nov. 24 in Orlando, Fla.

Prep Course Offered at UT!

Want to take the Florida Teacher Certification Exam and General Knowledge Test?

Studying has never been easier! The University of Tampa’s prep course offers tips, tools and practice exams. Get expert advice and coaching from specially trained instructors.

Curriculum specifically tailored to:
- Students working on a bachelor’s degree in education
- Teachers with provisional certification
- Career changers

Course starts Jan. 28 and ends March 4.

Boost your confidence! Register today at www.ut.edu/ftceprep.

Visit www.ut.edu/ftceprep or call (813) 258-7409.

Legalized Marijuana sparks blazing discussion

MARISOL MEDINA
Contributing Writer

While marijuana smokers in Colorado and Washington can legally “tune up,” those in Florida shouldn’t hold their breath in waiting.

On Election Day 2012, a historic amendment legalized the recreational use of marijuana in the states of Colorado and Washington.

Amendment 64 in Colorado has legalized the recreational consumption of marijuana and permitted possession of up to one ounce.

Consumers may have, at most, three flowering plants and must be 21 years of age or older.

The news was celebrated with joy by cannabis consumers all over the state.

Ramon Garo, a senior in mechanical engineering, agreed with the legalization because of the disparity between the state and federal laws.

“Alcohol, tobacco and certain medicinal drugs have just as many or more known negative effects than marijuana,” he said. “Taking into account that marijuana’s status makes it more lucrative for criminal activity, it becomes pretty obvious that the federal stance is not only inconsistent, but irrational.”

Shearon Lowery, associate professor in Department of Global and Sociocultural Studies, feels that the benefits of marijuana have been overlooked for far too long.

“It’s about time. Marijuana is less harmful than alcohol and has many medical benefits. There is no way that marijuana should be classified as a Schedule I drug,” said Lowery.

She is referring to a categorization that places drugs with high abuse risk and without any accepted medical use in a Schedule 1 category.

Marijuana is placed in Schedule 1 alongside heroin, LSD, PCP, and crack cocaine.

“Hopefully, the federal government will start reviewing research on the medical benefits of marijuana, which was stopped by George H.W. Bush when he became president in 1989. However, other countries did continue to do research on the drug’s health benefits and it is extremely promising, to say the least,” she said.

Some say legalization will permit the government to benefit from taxing marijuana, an industry that will generate considerable revenue to not only the government but to producers as well.

“According to a 2011 Gallup Poll, 50 percent of the American public favor the legalization of marijuana. Prohibition has obviously failed, just as it did with alcohol. Since prohibited drugs are connected to criminal networks of suppliers, decriminalization brings the trade into the public sphere where it can be properly regulated and taxed,” she said.

In Washington, marijuana will be taxed at a 25 percent rate three different times: when the grower sells it to the processor, when the processor sells it to the retailers and when the retailer sells it to the customer.

Raquelle Rodriguez disagrees with the use of marijuana but agrees with the legalization. She said too many people are incarcerated because of charges for possession of marijuana.

“Considering alcohol is legal, there is no reason marijuana shouldn’t be legal too. I don’t think people should go to jail or prison over using marijuana either. We are overcrowding our prisons over dumb charges like these and minorities are being disproportionately arrested because of them,” she said.

Derrick Christopher, a senior double-majoring in political science and international relations, said the state legalization is a groundswell for eventual legalization throughout the country.

“Alcohol, tobacco and other prohibited drugs do not make you a criminal. If the government wants to benefit from taxing marijuana, it should be regulated as any legal drug. We can take the money and put it back into the pockets of the government,” he said.

The bill written by Alex Castro, vice president of the SGC-MMC, was presented at a University wide meeting on Wednesday, Nov. 14, at Biscayne Bay Campus.

It also includes sponsors Mish Feldman, senator of housing, James Harden, senator of business, and Giovanni Castro, senator at-large.

At the meeting, Laura Farinas, president of the SGC-MMC, and Pablo Haspel, president of SGC-BBC, presented a new proposal which led to a motion passed by the committee that would unite both scholarship proposals.

Haspel said that even if the bill passes through both senate sessions after being presented on Monday, it must be approved by the University Committee in order to move forward and that it is ideal for it to be approved in one of the last meetings that will take place on Nov. 27.

The University Wide Scholarships are planned to reward students for leadership, academics, serving in the military, being a parent, for having between 60 and 90 credits, for being an engineering and computing student, an international student or a resident on campus.

Scholarships will apply to both undergraduate and graduate students who meet the credits and regulations established by the University. The criteria to award the scholarships haven’t been finalized yet.

OPPA PANTHER STYLE!

Students from The International Student Club of FIU’s Biscayne Bay Campus danced to Oppa Gangnam Style, a popular song by South Korean rapper PSY. The dance was coordinated to kick off the Panther Power Pep Rally at Panther Square for International Education Week.
