**Facility Senate discusses budget constraints**

**CARLOS COBA**
**REBECA PICCARDO**
**Asst. News Directors**

The approval of new academic programs and the impact of budget constraints dominated the agenda of the Facility Senate’s fourth meeting this semester.

In the Oct. 29 meeting, C. Delano Gray, chairman of the FIU Facility Senate, addressed proposed changes to the undergraduate core curriculum whereby credit hours are extended from 30 to 36 credit hours to accommodate science students — many of whom take a three-credit course and a one-credit lab. The facility senate will need to approve courses in a later meeting in order to add an additional 18-credit hours to the university core curriculum.

A conversation about budget constraints led to the admission that not enough funds exist to hire more than a handful of tenured faculty positions; the degree to which tuition has increased in the last four years, as much as 15 percent a year, has led to cuts in the budgets of deans and vice presidents over the next years.

Transitioning from high school to college can often be an overwhelming and scary process for many students, but through various programs in the University high schools students can acclimate to the college setting before they graduate from high school.

Programs currently offered to students include: Dual Enrollment, Academy for Advanced Academics, Maritime and Science Technology Academy and the Science, Technology, Engineering and Math Institute.

According to the Office of Dual Enrollment, Dual Enrollment is a program that allows students to simultaneously earn college credit toward a postsecondary diploma, certificate or degree at a Florida public institution and credit toward a high school diploma.

“Dual enrollment programs have been around for a while, but it has seen a recent increase in enrollment because today high school students can take the dual enrollment courses taught by University-approved teachers through their high schools or they can take classes on-campus.

The number of Miami-Dade County public school students in Dual Enrollment has increased from 425 in fall 2009 to over 6,000 in 2012-2013. Dual Enrollment has increased from five programs in the University high school students can acclimate to the college setting before they graduate from high school.

The Center for Leadership will kick-start its leadership lectures series on Oct. 18 with a discourse delivered by Martin Seligman, professor of psychology at the University of Pennsylvania, titled “Positive Psychology: The Cutting Edge.”

Seligman works in the field of positive psychology, which focuses on methods to allow individuals to lead meaningful and fulfilling lives.

Elected as president of the American Psychological Association in 1998, Seligman is the author of 24 books and 250 articles related to personality and incentives.

Seligman is also the recipient of the Laurel Award of the American Association for Applied Psychology and Prevention, and the Lifetime Achievement Award of the Society for Research in Psychopathology.

During the lecture, Seligman will touch upon a variety of subjects pertaining to his psychological research, including how to build and measure positive engagement, relationships, emotion and how educational and health institutions are utilizing positive psychology.

“I started reading about Seligman’s research during my freshman year and I think it’s amazing that he will be visiting. His work has so many applications,” said Marilyn Figueroa, a junior double majoring in sociology and women’s studies.

Other students also shared Figueroa’s enthusiasm.

“As college students, it’s so easy to be brought down by the pressure of doing well,” said Anais Prieto, a senior biology major. “I think this lecture will do a great deal to shed some light on the possibility...**

**WORLD NEWS**

Chinese journalism tries to crowdfund his career

From his temporary home on a friend's sofa, Yin Yusheng hopes to craft a new kind of journalism in China, where the industry is widely seen as state-controlled and corrupt. He wants to make his readers the boss - and that includes paying his salary. Once users pledge 5,000 yuan ($800) - half his monthly pay when he worked for a business daily - he takes a story up. He has completed one piece since beginning his experiment in crowdfunding in September, appealing to those who are “tired of the praises sung by the state-run media.”

Toronto mayor’s allies call for video’s release

Backers of embattled Toronto Mayor Rob Ford are calling for police to release a video that appears to show him smoking a crack pipe. They also are attacking the police chief for talking about the video even though the mayor is not facing charges. Dennis Morris, Ford’s lawyer, told The Associated Press on Friday that Police Chief Bill Blair acted as “judge, jury and executioner” when he announced Thursday that police had recovered the video and said he was “disappointed” in the mayor.

Largest camp for Syrian refugees becoming a city

The manager of the region’s largest camp for Syrian refugees arranges toy figures, trucks and houses on a map in his office trailer to illustrate his ambitious vision. In a year, he wants to turn the chaotic shantytown of more than 100,000 people into a temporary city with local councils, paved streets, parks, an electricity grid and sewage pipes. Zaatari, a desert camp near Jordan’s border with Syria, is far from that ideal. Life is tough here.

In Volume 25, Issue 32, in the article titled “Panthers making an international difference in Nicaragua,” international business graduate Maria Aguirre was wrongly attributed as Maria Del Caprio. In Volume 25, Issue 33, in the article “Intramural athletes offer on-site care” offer should be offered. The Beacon will gladly change any errors. Call our MMC office at 305-348-2709 or BBC at 305-919-4722.

**FACULTY SENATE WORKING WITH UNIVERSITY’S LACK OF FUNDING**

**ACADEMICS, PAGE 1**

said Provost Douglas Wartzok.

Also on the agenda:

- The University Board of Trustees approved at an earlier meeting a five-year extension of University President Mark B. Rosenbery’s contract.

- The University would begin construction of an Ambulatory Care Clinic, in partnership with Miami Children’s Hospital, to be finished by November 2014.

- Voted on Four Graduate Programs: a Ph.D. program in international crime and justice - the first in the country; a fully online master’s degree in special education; a master’s degree in clinical psychology and a physician’s assistant master’s degree.

Voted on a new minor in the College of Business Administration: a 12-credit logistics minor intended for non-business majors.

Voted on changing the grade-point average requirement for the rehabilitation counseling graduate program from a 3.2 to a 3.0 GPA, which is the national average for comparable programs.

Luisa Havens, vice president of Enrollment Services, also presented the financial aid report for the 2013-2014 academic year. About $191 million in financial aid were disbursed and 69 percent of the student body received financial aid this year.

Havens also mentioned that the average financial award through the Free Application for Federal Student Aid is $16,000 for a four-year track. This is below the national average, Havens said, underscoring the aforementioned lack of state funding affecting the university.

**HIGH SCHOOL STUDENTS ARE TAKING ADVANTAGE OF UNIVERSITY PROGRAMS**

**PROGRAMS, PAGE 1**

“Students that choose to take classes on-campus are able to experience what a college class would be like as well as take advantage of the many resources available to them on-campus,” Morgan said.

“AAA was founded in 2009 at Modesto A. Maidique Campus and hosts students from five senior high schools in the district. AAA at Biscayne Bay Campus was opened in 2011 and currently hosts students from Alonso and Tracy Mourning Senior High and Dr. Michael M. Krop Senior High School. In addition to AAA, the University opened MAST Academy in fall 2013. Mari- time and Science Technology Academy welcomed its first freshman class on Aug. 18 at the Biscayne Bay Campus.

High school students enrolled in these programs can take advantage of university resources and get a chance to work with university professors.

“Coming to school on a college campus is much better than a typical high school because we have better tools and resources to work with,” said Dave Benoit, a MAST freshman. “It also gets me excited to become a college student at FIU.”

**VETERANS GO TO SMITH FOR A QUICK FIX**

of leading a happy and healthy lifestyle in college, and I’m happy knowing that it’s made accessible to students.”

Seligman’s lecture will be the first in a series of five Leadership Lectures for the 2013-2014 academic year offered by the Center for Leadership, which coordi- nates the lectures to allow students and others the chance to hear from prominent figures in leadership.

“Each year, especially for the leadership lectures, we try to pick businesspeople, researchers, professors or anyone in an active leadership role who can bring something to FIU and our community, offering insights on leadership,” said Headley.

“Positive Psychology: The Cutting Edge” will allow students to hear about a scientific applica- tion of motivation in every day matters that don’t necessarily involve busi- ness activity, and set the foundation for thinking about psychology in a manner that doesn’t put mental abnormalities at its core.

“When I was studying psychology, I was studying maladies: what’s wrong with people and how to fix them. But here is a perspec- tive with a different focus, that is more meaningful today,” said Garth Headley, associate director of the Center of Leadership.

Resident privacy vs. maintenance personnel

MANUELLA MOTA
Contributing Writer

Until what point is your privacy as a student living in the residence halls in FIU affected by the way FIU housing facilities’ system of repair/maintenance works?

There is no doubt in affirming that the FIU housing facilities office is supportive in providing help for housing students, but the issue is when and how those maintenance services are happening.

The process behind requesting a repair in your room is quite simple. You are required to complete a work order request online, through the Housing Online Services (RMS), where you would describe the specific issue that needs to be fixed.

The FIU housing maintenance personnel completes requests from Monday through Friday between 9 AM and 5 PM and a request should be responded within 72 hours since the work order has been inputted.

The problem arises when students are notified that maintenance technicians are allowed to go inside the room if nobody’s there, which may cause a problem with a roommate who was not expecting the worker or just create an invasion of privacy concern.

This may seem invasive and even disrespectful to some students.

It is understandable that the workload for the FIU Housing Facilities (which manages several residence halls and apartment communities with over three thousand residents and provides a full-time job for over 25 mechanics and custodians) is considerably high, but a change in the system of repair/maintenance could be made, not affecting so much the employees and surely providing a more comfortable situation to students.

For instance, if when completing a work order students were able to choose specific dates/times within a block schedule (in intervals of 30 minutes in the morning and afternoon, for example), it is more likely for them, and roommates, to be prepared for the worker’s visit.

To make this work, the FIU Housing facilities office could schedule employees within those block schedules to only attend those specific appointment requests made by students, so they would have the time outside of the schedules to perform any other activity required of their job.

In this way, both employees and students would experience a better situation and neither would have to deal with an uncomfortable matter of invasion of privacy.

A student’s performance in a classroom is evaluated based on their knowledge, how they participate in class or the content of their writing assignments.

As a college student myself, I understand that doing well in class is a priority. However, I wonder if whether the criteria to excel in class should be tied to the hours I put into volunteering. Should volunteering at a non-profit organization be an essential component in the grading system in a college classroom?

In my case, volunteering at Harmony Health Center has been a positive experience for me. I assisted their staff in simple duties. My first time volunteering, I assisted the office with organizing a lot of paperwork. Because of my efforts and participation, I made friends with people in the office.

The experience itself made me realize how fortunate I am to have a family. I also am aware how fortunate I am to have the ability to move independently, to drive, to cure on two female patients, which I enjoyed.

My third time volunteering, I assisted a small group of patients. I spoke with one patient, who remains unnamed in sake of privacy. She seems to suffer from dementia because she keeps having irrational fears of her room being taken from her. Later, I did an informal manicure on two female patients, which I enjoyed.

The experience made me realize how fortunate I am to have a family. I also am aware how fortunate I am to have the ability to move independently, to drive, to clothe myself and to have basic conversations.

-Joulette Re
Contributing Writer

I wonder if whether the criteria to excel in class should be tied to the hours I put into volunteering.

I am not allowed to serve food to the patients. If a patient needs to use the bathroom, I am not allowed to help them. All I could do was talk to them. Most of them, though, just stared back or mumbled incoherent words unrelated to the topic at hand. Those that did speak intelligently were mostly Spanish-speaking.

My second time volunteering, I assisted the office with organizing a lot of paperwork. Because of my efforts and participation, I made friends with people in the office.

“New Secrets” collaboration is poetic, intricate

JOYNER has plenty of experience in the music industry. In fact, Callaci operates a perfect example of this is “The Frayed End of the Rope.” In this song, the lyrics describe an adventure through our country’s corrupt bureaucracy of a legal system. The bureaucracy promises to help you by holding “the frayed end of the rope,” but instead cuts the rope you are holding on to for dear life.

Conversely, although the album is mostly centered on lyrics, the music is seldom upbeat or major and has a very steady tempo. This can get a bit tiresome over time and cause the listener to phase out and miss out on the genius flowing from the lyrics. For example, in the song “Mary,” which is the opening track to the album, the accompaniment stays the same throughout with little to no dynamic. On top of that the vocals produce some very awkward harmonies that can immediately turn the listener off to the album as a whole. However, after some analysis of “Mary,” the awkward harmonies and drone accompaniment actually sets the tone for the album. Every awkward harmony is placed in areas so as to augment the meaning of the words. This shows that the stories aren’t “pretty,” but dark and unjust.

In conclusion, this album is the very definition of poetry. With every listen to the album you will find new things to love in the lyrics and music. The lyrics are amazing and intricate enough to allow for open interpretation and the music uses a strophic form to create a canvas of dark colors to paint a world of turmoil, corruption and depression in the most artistically satisfying way possible.

Dennis Callaci and Simon Joyner have created a book of poetry in the form of an album that does not deserve to be left as a “New Secret,” but as a well-known testament to quality songwriting.

This album gets a four out of five.

Kinsella’s “L’Ami du Peuple” does not disappoint

FORMALLY a singer-songwriter project, Kinsella has released about 15 albums during his career. They have known each other since the early ‘90s and, as a result, Callaci and Joyner have great chemistry that is showcased within the musical context of their work, “New Secrets.”

The style of the writing can be most described as Bob Dylan trying out emo-indie and doing a good job. But, I mean, a really good job. The track that is a perfect example of this is “The Burning urge to flee...” and a “…hereditary mob you can’t run away from.”

In the verses and choruses of “Bad Blood,” we see Kinsella touch upon family issues and not necessarily being proud of where he came from. In the opening verse of “I Got High,” Kinsella sings “I’ve been sitting here the better part of 18 years; blank stare, blank canvas. I’m in need of a new view or some new sceneries to render,” seemingly expressing the need to break free of where he’s been stuck.

Throughout the soft melodies and captivating guitar instrumentation, Kinsella bemoans of “the burning urge to flee...” and a “…hereditary mob you can’t run away from.”

Kinsella’s style of writing isn’t usually obvious or in-your-face, but neither is it too vague or obscure. He manages to easily get his message across without obviously having to spell out what he’s trying to express. With that, Kinsella is able to relate to his audience smoothly.

Although labeled as an acoustic singer-songwriter project, Kinsella doesn’t shy away from the bold drumming, twinking pianos, violins and other instruments. Listeners are shown this in “Blues to Black,” where very gentle vocals and strumming lead the way to mini explosions of sound layered with beautiful harmonies flowing about. Kinsella’s subtle ability to layer instruments in a way where they both compliment one another but still show individual complexity is not only shown in “Blues to Black,” but rather is a recurring trend and exemplified throughout the album – notably in “Collin Companions,” “The Burial,” “Who Cares?” and “Vivid Dreams.” It’s a fundamental trait of his musical style and his compositions are unlike many others because of this.

Owen is a beautiful blend of subtle, yet complex acoustic guitars and moving lyrics all tied in with the soothing vocals of Kinsella. Although a low-key style of playing and production, Owen’s ”L’Ami du Peuple” is able to captivate listeners with its melodies and compositions.

Making Chicago proud, Kinsella produced another brilliant album he’s able to add to his already great resume.
Not all students spend spring break on the beach.

When you imagine your college experience, think of how the Coast Guard can add to it. Open to Historically Black Colleges and Universities, Hispanic-Serving Institutions, and Tribal Colleges, the Coast Guard's College Student Pre-Commissioning Initiative (CSPI) is putting students everywhere on the path to success. Once enrolled, CSPI will cover up to two years of your tuition, fees and textbooks, along with a monthly salary of approximately $2,200. The best part is having a guaranteed job the moment you graduate. With exceptional benefits and the promise of a meaningful career, CSPI is giving you the tools to succeed and a college experience unlike any other.

Defense improving as season’s end approaches

YOSVANY RODRIGUEZ
Staff Writer

After a tough start to the season, the FIU men’s soccer team (6-8-1) (2-4-1 Conference USA) has seen a resurgence on the defensive side of the ball.

FIU began the first eight games of the season playing some sluggish defense. Through those eight games FIU was one of the worst defenses in the nation allowing 17 goals in eight games, an average of 2.12 goals allowed per game. To put that into perspective, if the Panthers were to have maintained that average they would be ranked 191 out of 198 total teams in goals allowed per game.

During the defensive rut, FIU started three different goalies. The first goalkeeper to get a chance was sophomore Robin Spiegel. Spiegel had been FIU’s starting goalkeeper last year, but injuries have slowed him down this last year, but injuries have slowed him down this last year, but injuries have slowed him down this last year. However, Mion would allow four goals the very first game and was quickly sent back to the bench.

Fortunately for FIU, the Panther offense helped weather the storm as they were hitting on all cylinders during their defensive slump. During the first eight games FIU managed to score 16 goals, which was enough to place them in the nations top 20 scoring offenses. The Panthers were 3-5 during this stretch. While FIU managed to win three games despite their defensive woes, they had to make drastic improvements if they hoped to continue winning games.

The Panthers have definitely ratcheted up their defensive intensity over the last seven games. FIU has allowed just five goals in their last seven matches, an average of 0.71 goals allowed per game. The 0.71 average would place FIU 18th in the nation if it were extrapolated throughout the entire season.

If the five goals through seven matches weren’t impressive enough, it should be noted that one of the matches came against the University of Alabama at Birmingham who at the time was ranked first in the nation in scoring. The Panthers held UAB to just one goal.

In fact, during the seven game stretch the only time FIU allowed more than one goal was in an overtime loss to 25th ranked University of New Mexico, where the Panthers surrendered two goals. FIU is currently averaging 1.56 goals allowed per game.

“We just had a lot of guys come in to the team in August.” Arena said. “We had two weeks together and what you are seeing now is a result of a group that’s been together for the proper amount of time. Most professional teams are together for two months of preseason, in college we get two weeks. Now you are seeing the final product of our group offensively and defensively.”

FIU has 15 new players this season, which may of led to the slow start. One of the new players and one of the bright spots on the Panthers has been freshman defender Marvin Hezel. Hezel has started all 15 games for FIU and has played the most minutes of any player on the team, 1338. The 6 foot 3 defender out of Germany has provided a big presence on both sides of the ball for FIU. Apart from his obvious impact on the Panther defense, Hezel has also contributed to the offense, with three goals on the season.

FIU will look to finish out the last two games on their regular season slate strong, as the team still feels that there is much more left to accomplish.

“We could play with anyone,” Arena said. “We still have two games, and we still have a lot to prove.”

**Football near dead last in offensive categories**

I’m not sure if anyone has told the offensive players for the Panthers, but they should strive for being ranked in the 100s when there are only about 120 teams in Division I football.

When you look at a team that pulls in ranks of 123 out of 123 possible football programs for total offense, tied at 117 out of 123 overall for both passing and rushing yards, it is easy to understand why the team has only a single win going into a matchup against East Carolina University on Nov. 2.

The quarterback should be a keystone set player in your offense, but was not present on this roster -- or at least I didn’t see that between Jake Medlock and E.J. Hilliard, who combined had totaled just above 1,000 yards in the air. The former combined for just over a 50 percent completion clip in the season with 1,016 yards on 85 completions and 16 attempts.

The less than average performances by the quarterbacks are not solely to blame on them though as the receiving core tends to drop passes that should, in my opinion and the opinion of some of the scouts from the National Football League who have attended some games, be caught.

There are only three receivers who have double digit numbers in receptions, those being: wide receiver T.J. Lowder (16), tight end Jonnu Smith (16) and wide receiver Clinton Taylor (12). Lowder, who also has moved on to the University of Alabama, was the entire offense for the team’s only win. The two games he played in before the USM game, he only racked up 33 yards on 30 carries. But the freshman Loxahatchee, Fla. native broke out against USM and gained 136 yards on 29 carries in that single game.

Since the breakout performance, he has only registered 87 yards on 38 carries before the game against the Pirates.

Through seven games the second leading rusher was Lamarq Caldwell, Caldwell, a sophomore out of Tampa, Fla. is one of the only skilled position players who has dealt with the ball in all seven games. He has 235 yards on 74 carries.

As a fan of the game, it is hard to watch a team struggle as much as the offense has in the majority of the season. This especially coming from a team that had so much promise when current Indianapolis Colts wide receiver T.Y. Hilton was the entire offense for four years – by the way, Hilton’s name is only in the record books for the team 315 times – under former head coach Mario Cristobal, who also has moved on to bigger and better things as he is now the offensive line coach for the number one ranked team in the country, the Crimson Tide of Alabama.

The Panthers will travel to Murfreesboro, Tenn. on Saturday, Nov. 9, to face former Sun Belt Conference opponent – the Blue Raiders of Middle Tennessee State University.

The FIU rugby team keeps coming back strong as the end of its season approaches.

The Panthers have qualified to participate in the All-Florida cup after defeating University of North Florida 39-5 last Sunday, Oct 27.

“That was the biggest weekend for us, the match came down to UNF and FIU and whoever won this game got the spot for the top four team,” Senior captain Kyle Gilbert said.

The All-Florida Cup will be hosted in Orlando on Nov. 23.

FIU finished fourth for the All-Florida cup, and will go against the nationally ranked University of Central Florida.

“We just came out ready to play, we knew if we lost this game there was no postseason,” Gilbert said.

The Panthers remain hopeful and focused to take on their biggest challenge, UCF. “We lost to them 55-10 last time, but we play them first in the All-Florida cup. Yet now we know their team and how they play, which is really helped us. So now it’s a matter of adjusting and playing the best we can,” junior Jose Laphitzondo said.

If the team does not win first place in the All-Florida cup they will be fighting to remain among top three.

Three weeks ago six Panthers in Gilbert, Laphitzondo, Geroge Evora, Felipe Echeverri, Chris Herrera and Nestor Saroza got invited to play in the South Independent Rugby Conference this season. They were part of the south team, that went against players from the north team; the south won 65-16.

“We ran over the other team, and we had a lot of players from FIU,” Laphitzondo said.

A week later an announcement was made announcing five of the six Panthers, Gilbert, Laphitzondo, Evora, Herrera and Saroza were chosen for the 23 player All-Star team.

Gilbert has been chosen to be captain of this All-Star team.

“It wasn’t easy, but we had a lot of fun. We traveled for about 12 hours and we finally make it there and we won. I’m really glad I made it.

Junior Jose Laphitzondo
Men’s Rugby

The veterans on the team have worked hard to teach the newest members all the strategies, as well as prepare them for the tough challenges ahead.

“They’re doing great and they’re growing every week,” Laphitzondo said.

It was the first season for Barrington McNutt, and his teammates feel confident for his bright future.

“This is his first season and he’s excelling greatly he may be able to make the All-Star game,” Gilbert said.

Sophomore Cesar Hurtado was forced to step in for the three-term President of FIU’s rugby team, senior Pablo Garcia, who suffered a knee injury during the summer that prevented him from playing the fall season.

“Cesar has been starting the past three games, he’s a little monster on the field,” Laphitzondo said.

The Panthers will host their homecoming game against University of Miami on Saturday Nov. 9.

This match will be the last of some veterans. Garcia has been slowly returning to the team, and will play the last game of his college rugby career against Miami.

“It’s great to have him back on the team, he’s the reason why FIU rugby has survived and he shows great leadership,” Gilbert said.

FIU is confident their game against Miami will result in a win, seeing as they have won against Miami three years in a row.

“We’re gonna be running the same game we’ve been running this season. We’re just gonna add more stuff from all the experience we’ve gotten so far,” Gilbert said. “Miami is our house.”

Senior Panther helping lead the way for swimming

LUIS BARBOSO
Contributing Writer

The FIU swimming team has enjoyed its fair share of success these past couple of years – a lot of it having to do with the settling of Coach Randy Horner as well as its star senior swimmer Sonia Perez Arau.

The great performances by Perez Arau have been contagious for her fellow swimmer counterparts. She captured her first Conference USA Swimmer of the Week honor early last month on her performance against the University of North Florida, where she excelled on the 400 IM and the 100 Backstroke events. This has not been her first accolade here at FIU, as she is also recipient of two Sun Belt Swimmer of the Week honors.

Arau is a 22-year-old born and raised in Barcelona, Spain. Although Arau is now what you may classify as a star swimmer, she has not really been on the bright side of luck and success all her life. She struggled a big way in Spain before deciding to take her talents to the Western hemisphere.

Before leaving Spain, she won the 100 and 200 Back at the Spanish Junior Championships. But things did not really quite go as planned after that for Arau, as she later had some problems with her new coach and pretty much reached a career low on her swimming life.

“My coach in Spain coached a certain way, and a lot of coaches here in Spain are pretty much the same, their way or no way,” Arau said. “I struggled a lot and lost all my confidence until the point when I didn’t want to keep swimming anymore.”

After the blow to her confidence, she decided to come to the United States where even though she had some problems with her test scores, she was accepted to the University of Bridgeport, a Division II University where she excelled in her events.

She did not want to stop there – she had an initiative and decided to email some coaches and universities. This was when she drew Coach Horner’s eye which had an eye on her since he was coaching at Missouri State University. After listening to some of the coaches, she decided to come along with Horner to South Florida.

“I contacted Coach, and he believed in me. That’s how I got here, coming from Spain where nobody believed in me. Coach contacted me and convinced me after all of their new plans, no other coach made me feel like he did and I didn’t even know him but on the phone he made me feel that this was my place,” said Perez Arau.

Since then, Arau has been nothing less than amazing at FIU and has stepped up during all her adversities by getting it and forming her struggles into a drive for success.

“When Coach first told me the times he wanted me to reach, I started laughing. And after all of what I have accomplished, he has been a big part of my success, now when I look back and see all of what I’m doing, it’s unbelievable.”

Even with all her success, Arau is still a very shy girl.

Her main hobby is shopping, something she calls “my other sport.” On her time off from her two sports, she just likes to watch TV and go out and hang out with her friends.

She now looks ahead with hope for this season as one of the top swimmers in Conference USA trying to lead FIU on her senior season – a season in which, despite some sickness and injuries in the team, Coach has commented, “We are in stride with where we’re at in the season. We developed a season plan to develop the kids as fast as possible for the end of the year. Everything is a checkmark along the way and we are right on course.”

From Darwin to Star Trek, professor evaluates the sublime

ALEXANDRA MOSQUERA NETZKARSCH
Contributing Writer

Students curious about time and space have a chance to learn from English Professor Bruce Harvey at the School of Environment, Arts and Society. Harvey has written extensively on philosophical concepts such as scenes from science fiction movies. This year, Harvey decided to bring this body of research and present it to the faculty to discuss bigger implications from their research and present it to the community.

In his lecture “Deep Time: From Darwin to Star Trek” that will take place on Nov. 5 from 7 p.m. to 8 p.m. at Luna Star Cafe in North Miami, Harvey will present a very interesting array of philosophical concepts in relation to the notion of time, how space and depth are perceived and why it is important to put thought into these ideas.

Harvey said “sublime” is the key term for this event.

“[It’s] how we imagine the infinite space and how it has a history going from Darwin to Star Trek,” Harvey said. “I’m interested how fundamental concepts can be known by popular media and how it translates into the popular culture.”

According to Harvey, deep time is seen as a geological time notion; the time existing in immense infinite way preceding the current moment. It’s called deep time because for English naturalist and geologist Charles Darwin, it is meant the same as geological time, which means that time is measured by strata that goes downward in layers which we can see for example in mountains.

The Earth and its existence are measured by the geophysical depth of strata, “conceptualized as an almost infinite regress of previous time, connected with the immensity of time it takes for geological developments to happen and by extension, evolution,” Harvey said.

Deep time is a way of thinking about the sublime and the sublime translates into how we might conceptualize time and geological processes.

In the lecture, Harvey will make sense of these terms and explain what the sublime is. “The sublime is the area that is a little overwhelming, beautiful, not quite containable, immense and cannot be cognitively be put in a box,” Harvey said.

Harvey says he will also ask questions.

“How do we imagine the sublime: an immense, infinite space going outward, or geological space going downward?”

The universe is not just about temporality and how the universe is so broad and how it might extends infinitely into space,” Harvey said.

The thought of the universe being infinite and even imagining a spaceship in that infinite space is something that first appeared in images with Star Wars and Star Trek. Harvey said he will use examples such as scenes from these movies to help illustrate and clarify his lecture.

According to Harvey, the way we imagine the immensity of space and depth isn’t possible without an anchor. “You won’t be able to do it,” Harvey said. “It is impossible to be thought of and this relates to the philosophical concepts of the sublime.”

Harvey said his goal is to have students commonly understand science through lectures and events like those of SEAS.

Elaine C. Pritzker, coordinator for SEAS, said these kind of events, which are casual and informal, allow faculty to discuss bigger implications from their research and present it to the community.

“The faculty [does] amazing things, and we haven’t run out yet of professors that want to participate in these events,” Pritzker said.
