FSU sexual assault case highlights campus issues

ADRIAN SALGADO
Asst. News Director
adrian salgado@fiusm.com

Erica Kineman, the woman who accused Jameis Winston of sexual assault at Florida State University, reached a settlement with the university and has agreed to drop a Title IX lawsuit against the university.

FSU will pay Kineman $250,000, according to a release from the university. The school will pay her attorney an additional $700,000.

"Although we regret we will never be able to tell our full story in court, it is apparent that a trial many months from now would have left FSU fighting over the past rather than looking toward its very bright future," FSU President John Thrasher said in a statement.

“We have decided to instead move forward even though we have full faith that the ultimate outcome of a trial would have been consistent with the previous law enforcement investigations and retired Supreme Court Justice Major Harding’s findings in the student conduct hearing.”

Kineman’s attorneys stated the lump sum payment of $950,000 is the largest in history to a single plaintiff to settle Title IX discrimination claims of this kind for a school’s indifference to a plaintiff’s sexual assault.

“As a mother of two of my own, and a mother of twins who are juniors in Texas Wesleyan’s School of Music, I want to do anything in my power to help rescue dreams,” said Wendy X. Ordonez, coordinator of outreach and educational media of FIU, explaining how “We would love for it to be a requirement for every class to host one of our presentations so students can get the information from someone who has been trained in the subject.”

“This has been an increasingly controversial issue in Texas since lawmakers passed a “campus carry” law, allowing licensed Texans carry concealed handguns on their campuses, publicly identifying herself as a plaintiff’s sexual assault victim,” Kineman said in her complaint that coach Jumbo Fisher and associate athletics director Monk Bonaosrote knew of the sexual assault allegation in 2013.

FSU, explained how “We would love for it to be a requirement for every class to host one of our presentations so students can get the information from someone who has been trained in the subject.”

“With all the economic demands we face, at some point it doesn’t make sense to continue even though we are convinced we would have prevailed,” Justice Major Harding determined during a hearing in December 2014 there was not enough evidence to indicate Winston violated the FSU student code of conduct.

"I personally saw merit in campus carry," said Jay Brown, a psychology professor at Texas Wesleyan. "It’s about faculty teaching and students learning. Anything that interferes with that process shouldn’t be there.”

In terms of public universities addressing concealed weapons on campus, the effort to permit concealed guns on the campuses of Florida’s public colleges and universities was stalled last week by Senate Judiciary Committee Chairman Miguel Diaz de la Portilla of Miami-Dade County.

“We believe that the issue of concealed weapons on college campuses is a matter of public safety, and we support the Florida legislature’s efforts to address this issue," said Lyndsey Blessing, a junior and resident assistant at Wesleyan University, said she had mixed feelings about campus carry legislation.

“I personally saw merit in campus carry,” said Jameis Winston junior said. “(But) it would have been scary to have guns on campus ... roommates could always get a hold of them.”

“Wendy X. Ordonez, coordinator of outreach and educational media of FIU, explained how “We would love for it to be a requirement for every class to host one of our presentations so students can get the information from someone who has been trained in the subject.”

“I would have supported a decision either way.”

Starting in August, Texas becomes one of a handful of states allowing concealed weapons to be carried on some college campuses, along with Colorado, Idaho, Kansas, Mississippi, Oregon, Utah and Wisconsin, according to the National Conference of State Legislatures.

“This has been an increasingly controversial issue in Texas since lawmakers passed a “campus carry” law, letting licensed Texans carry concealed handguns at public universities as of August and at community colleges in 2017.

Private colleges have the ability to opt out; public universities may create gun-free zones on part, but not all, of the campus.

In Florida, allowing concealed weapons on campuses has widespread opposition from college and university presidents, campus police chiefs, the League of Women Voters and most Democrats, as well as several student and faculty organizations.

In a coincidence of timing – and before Diaz de la Portilla’s decision was widely known – U.S. Rep. Debbie Wasserman Schultz expressed her disapproval of pro-gun bills moving through the Florida Legislature.

“I’m here to sound the alarm to make sure that they wake up and understand that they should be listening to people,” she said. As a mother of twins who are juniors in college.
Ted Cruz takes another step down the path to evangelicals

Ted Cruz, who has focused on attracting evangelicals, may have gotten the ultimate “get” of endorsements this week: Phil Robertson, aka Duck Commander, reality TV star and gun-toting preacher.

In an ad that is sure to appeal to those voters, Robertson, dressed in camouflaged fatigues, said, “My qualifications for president of the United States are rather narrow: He is or he godly, does he or she love us, can he or she do the job and, finally, would they kill a duck and put him in a pot and make him a good duck gumbo?”

“Not many evangelicals come out of Cuba,” Trump has said at several campaign stops. In his book, “A Time for Truth,” Cruz said, “Although my mom and dad had both been raised in nominally Christian homes, faith at that time was not real to either one of them.”

Both his mother, Eleanor Darragh, and his father, Rafael Cruz, married their first spouses in the Catholic Church. According to the Travis County, Texas, marriage certificate obtained by McClatchy, Cruz married Julia Garza on April 5, 1959, at St. Austin’s Catholic Church.

Cruz, born in Calagly, Alberta, in 1970 after his parents’ 1969 marriage, himself may have been baptized in the Catholic Church. Gillian Stewart, a journalist who knew Cruz’s parents in Calgary and socialized with them before he was born, told McClatchy, “I think I went to his christening. I often speak with students during very busy times, including adding 38 security cameras, electronic gates and fences around dorms, enhanced lighting across campus, a full-time security dispatcher, five security officers providing round-the-clock security and additional off-duty Fort Worth police officers who monitor the campus and police departments.

Wesleyan has held a series of open forums and reviewed feedback from students, staff and faculty, as well as discussing the issue with the Student Government Association, Alumni Association Board, the Student Life Committee and the Board of Trustees Academic Affairs.

“Originally from Iraq, I grew up with various horrors and disturbing to me to think they could be happening on any college campus,” he said. “I’m not going to class every day,” he said. “Why not give us the possibility, the potential, to defend ourselves?”

And Breanna Lockwood said she understands that many people are afraid of fear isn’t worth sacrificing anyone’s life.

“Fear does not trump a God given right, a constitutional right,” said the 20-year-old Arlington junior who plans to get a concealed handgun license as soon as she’s 21. “We are not safe anywhere any more. That’s just the harsh reality.”

“Not everyone agrees.

“Not everyone agrees. For a campus carry forum last year, Alcira Katagiri, a 23-year-old junior from Arlington, said this about public safety.

“Whatever the numbers, Zahraa Saheb, a 23-year-old senior at Wesleyan, said she’s very glad trustees made Texas Wesleyan off limits to guns.

In Texas, more than 925,000 people, around 4 percent of the state’s 27 million residents, have a license to carry, according to the most recent Texas Department of Public Safety statistics.

“Not having to have that worry (of anyone carrying a concealed handgun), ... not installing metal detectors, ... there’s a certain amount of relief that comes with that.”

Creativity holds value in this digital age

M TALK

One of the great things about attending a university is that even if you’re unsure of what you want to do with your life, you can take a variety of different courses to figure it out. By the same token, it’s not uncommon to find people opting to major in something like Demark Hough, write like James Patterson or sing like Mariah Carey while but you can always improve your talent, it can’t be taught. This doesn’t just extend to creativity, it extends to virtually everything. This is why society’s way of telling us from an early age what careers we should have in order to be successful is so problematic.

Currently, if you look at the curriculum in any type of educational institution whether it be elementary, middle, high school, or even at the university level, you’ll notice that there has been a strong push towards an education focusing on Science, Technology, Engineering and Math (S.T.E.M) because it’s thought that these skills will help a student achieve success.

Success comes differently for everyone, so why are people focusing on these subjects more than others? Like the arts, for example? If these subjects are important, schools push them as if they’re the only subjects that matter and are completely disregarding the importance of helping students cultivate their creative skills. This complete disregard for creativity is ironic because, regardless of their medium, it’s the legacy of the creatives, through the artists’ work, that our culture is preserved.

In fact, according to an article in “Firesouling,” studies have shown that ‘highly creative people are highly intelligent but highly intelligent people are not always creative,” this therefore suggests that “creativity is simply a higher form of intelligence.” Yet people tend to think otherwise.

Everyone believes the societal stigma that in order to be successful you have to be a doctor, scientist, lawyer, engineer, etc. in some way; but the lack of initiative to try something else, like a creative outlet, doesn’t help in breaking through this ideal especially with programs like S.T.E.M around.

The digital era we live in may make it seem like we have more possibilities to express ourselves creatively than before but by not giving yourself the chance or the time to be creative, you’re restricting yourself and therefore killing your creativity. University professor, Martha Baranovitsch, believes that creative works are absolutely essential for sustaining our culture. “It gives us a sense of who we are. It helps us identify where we are in a particular place and time and it helps us our growth and it also helps us know our past and it helps us kind of look towards where we’re going in the future,” Baranovitsch said. “Without creative works, especially in education or creative works in society we don’t have an opportunity to kind of stop and identify who we are and where we are and what we want to do and where we want to go.”

If we want the future of our world to be able to look back at its history, like we do presently, then we must strive to have creativity. Future generations must have access to everything, from our scientific discoveries, to our culture, to our laws and to our arts, after all there must be a reason why Albert Einstein said that, “imagination is more important than knowledge.”

Américas!!!

We are a nation of immigrants formed by the different cultures and customs of our ancestors. This is how our nation came together and if this idea is challenged, it would forever redefine the history of America. I am born from a family of immigrants who craved the pursuit of a better life. They had no idea what to expect, or what would become of them during their journey. The only truth that was fixated in their minds was finding a place where they could forge a path for a potential future.

They were given the opportunity to make a new home. In that process, they changed the outlook of my circumstances, giving me the chance to live in America and I couldn’t be more grateful for that. Overtime, they got their residency and became citizens of the United States of America.

According to the New York Times, the supreme court is in the process of revising a previous law that used the mass influx of immigrants, creating this idea that there will be less jobs available for them, but that is not the case. Many immigrants come here, running from fear of persecution, with no means of income, searching for a healthier environment for themselves, and their families.

In the grand scheme of things, there are multiple benefits of immigrants residing here. They are helping the economy, and in turn, helping America prosper, not only economically but through the promotion of diversity, a familiar concept to us.;

We live in the heart of a thriving city, crossing paths with multiple ethnicities every day. This is what makes FIU so attractive, being open to numerous nations who unify together as one. Just as Venezuelan student Ana Capdevielle says, immigration is “something positive. You’re adding more stuff to society, and the way I think may be different from you, but if we combine them, then something better can come from both of us.”

Volunteers invited to restore nature preserve

LESLIE OVALL
Asst. Entertainment Director
leslie.ovalle@fiusm.com

Friday, Feb. 5, FIU’s office of university sustainability will be hosting one of many nature preserve volunteer days planned for the semester. The event run from 1 p.m. to 4 p.m. and volunteers are required to meet at the north entrance of the nature preserve, across the street of the Wellness and Recreation Center.

The volunteer day will begin with a 15-minute tour of the university’s nature preserve, a 14-acre environmental education facility that represents the Florida Everglades. It is home to three different ecosystems that are a habitat to many animals and plants, some of the flora found is considered threatened or endangered.

“[The volunteer days] will help students relate to why it is important to preserve these areas,” said Burgess.

Volunteers are required to arrive prepared in appropriate attire such as closed shoes, long sleeved shirts and long pants. Sun-protective gear is a reusable water bottle are recommended.

The tropical hardwood hammocks, also found the nature preserve, are found on higher elevations. They are habitat to many green, vegetated shrub and canopy layers, creating a tropical rainforest setting.

The third ecosystem found is the freshwater wetland, which mimics the everglades’ complex wetlands that include dwarf cypress swamps, pond apple forests and sawgrass prairies. Some of these are only flooded seasonally.

“Our focus this semester is to continue clearing this area from invasive plants, which hurt the balance of the ecosystems,” said Burgess.

It is not mandatory for individuals to register; however, if it is a group of five or more people the Office of University Sustainability should be contacted at 305-348-3717 or gogreen@fiu.edu.

FIU sex carnival to bring awareness

GUETHSHINA ALTENA
Asst. Entertainment Director
guethshina.altena@fiusm.com

Sex carnival is not the typical name of events going on campus, that’s one of the many aspects that gives it a unique representation.

The sex carnival’s goal is not only about informing students about how to stay safe, learn about consent, but also to explore many of the campus’ resources. The carnival will make the FIU community aware of the dangers that are still out there, like unprotected sexual intercourse. This event will teach participants about safe sex practices, the importance of good sexual health and how to achieve it.

A survey by the Society for Adolescent Medicine shows that among college students who live away from home, 56 percent had been sexually active while attending college, and 73 percent of that group reported having unprotected sex while in college.

The sex carnival will be happening in the Graham Center on Feb. 3 from 11 a.m. to 2 p.m. The Healthy Living Program who organizes this event welcome all interested students.

Hubert Library hosts a culmination of science and art ‘In Deep With Diatoms’

LESLIE OVALL
Asst. Entertainment Director
leslie.ovalle@fiusm.com

The Glenn Hubert Library at Biscayne Bay Campus will be opening the month of February with a new art exhibition—“In Deep With Diatoms.”

Diatoms are single-celled organisms that have been on Earth since the Jurassic Age. They have been coined “champions of photosynthesis” by planktonchronicles.com and the Joing Genome Institute. The exhibition will be welcomed Feb. 1 with a panel discussion at 3 p.m. in Hubert Library Room 175 and a reception at 4 p.m. in the ASK Center on the second floor.

These microscopic organisms have been a topic of study and research at FIU, according to Bryan Cooper, associate dean of FIU libraries.

The Tropical Botanic Artists, a group who pursues the beauty of tropical flora through art and the artists participating in this exhibit, have history of collaborating with FIU science programs and students research.

“The artists created the diatom series in 2015 and we were fortunate to arrange for the exhibit to travel to the Hubert Library, after its tours at the National Park Service and the Frost Museum,” said Cooper.

The panel discussion will be moderated by Xavier Cortada, Artist-in-Residence at FIU and internationally established artist. Artist-in-Residence at FIU and internationally established artist. Art-in-Residence at FIU and internationally established artist. Also participating the panel will be Pauline Goldsmith, co-founder and artists at The Tropical Botanical Artists; Jim Elser, professor at Arizona State University; Nick Oehm, education and outreach coordinator at the Everglades Long Term Ecological Research Program; and Evelyn Kaiser, interim executive director of the School of Environment, Arts and Society.

“Notable panelists will focus on the nexus of art and science , as represented through the paintings and ceramics,” said Cooper.

The exhibit is free and will be open through the spring semester and is open to students, faculty, staff and the larger community.

“We would hope that students gain more awareness about the importance of art, design and creativity in the sciences,” said Cooper, “how each area together can make individuals better-rounded [sic] and hence more successful in their academic, professional and personal lives.”

RSVPs are appreciated so that catering can be planned appropriately. For this, Cooper can be contacted directly at lbcooper@fiu.edu.
Cooking isn’t solely a woman’s job—men have learned to cook too throughout the ages as a means of survival. In fact, surprisingly there are more male chefs than there are female chefs in spite of women being the overwhelming majority who cook domestically. Chefs and professional cooks—even mothers or fathers who cook pour their heart and soul into the meals they are creating.

Let’s face it: if you’re in a terrible mood you won’t make the best meal or even the best smoothie for that matter. In this article I am going to be describing the process of me concocting an organic vegan smoothie.

This is important. I’m a woman but can’t cook to save my life. I was inspired mainly due to learning how to become more health conscious and how to live sustainably the last couple of years. Smoothies, oats, fruits and morning shakes are some of the most nutritious foods to eat for breakfast. They’re also surprisingly easy to make. First, I purchased organic frozen mixed berries from Costco (sourced from Cascadian farms). They include: blackberries, raspberries, strawberries and blueberries. All contain potent antioxidants, which help the body fight toxins and free radicals. Ingesting berries or any fruit for that matter can also help your skin look more vibrant, clear, and radiant. I added those fruits to a blender and almond milk to go with it, which is fantastic because almond milk is an excellent source of your daily intake of calcium, vitamin D, and not to mention is it vegan. Almond milk actually has a higher concentration of calcium and vitamin D than regular cow’s milk. After this, I added water into the mix to make the consistency of the smoothie smoother and easier to drink. After everything is mixed in together and blended I also like to add some fruits to enjoy on top of the smoothie such as cut up banana pieces or blackberries to make it look more appetizing.

What I’ve recently discovered is that fruits, seeds, hemp and flax are also great antioxidants (and alpha-linolenic acid are also included in these seeds. Both are anti inflammatory and can help lower cholesterol levels.

The benefits are substantial with these super foods. I particularly enjoy having this organic vegan smoothie in the morning as a healthy and strong start to my day. Also, if you want to sweeten the smoothie I would strongly suggest using organic raw honey as opposed to agave. Agave harbors more calories than sugar, and agave sweetener sold today is processed and refined. Many people may not know this, but honey contains powerful antioxidants comparable to fruit! Researchers say honey contains varying concentrations of polyphenols, which are antioxidants that are thought to reduce the risk of heart disease and cancer. Adding raw organic honey is just a plus to an already delicious and nutritious drink. I hope everyone can create this at home instead of buying them elsewhere; you’ll find it is just as good — maybe even better. Enjoy a healthy and delicious addition to your meal while saving money and living sustainably.

**Standout earns preseason award**

**SANTIAGO ARCHEIRI**

Staff Writer

santiago.archeiri@fiusm.com

Stephanie Texeira was named to the 2016 C-USA Softball Preseason Team last week. With the team preparing to go into the season with some momentum, this could be just another kickstarter and an extra boost as the season is around the corner.

Texeira, the junior first baseman, was chosen by a pool of league coaches in Conference USA. The coaches also have Florida International University ranked sixth out of twelve teams in the Conference USA preseason standings. Two of the top 5 teams ranked are in FIU’s division, with Florida Atlantic University in first place, and Marshall in second.

After a record breaking season, Texeira looks to add more to her resume this upcoming season. Last year, she shattered the school record after averaging a .444 batting average, and finished with the second highest RBI in school history with 51. Her on-base percentage was the highest in Conference USA with .833, while ranking third in RBI. She also reached the FIU softball record books by getting on base in 33 straight games.

The hardware and spotlight is no stranger to Texeira, who is entering her third season with the Panthers. Texeira has earned preseason recognition in the past two years after last week’s announcement of her latest award. Texeira was also awarded Conference USA freshman of the year in 2014, while she earned two hitter of the week awards in her hot freshman start. When it comes to post-season awards, she has been in the Conference USA. Second Team twice already.

The first at bat for Texeira was a home run run against Houston last year, and it looked to be a sign of how the season would shape up for her. Texeira was nearly impossible to face for opposing pitchers, and that became clear when she was walked 25 times in March of last season. In an 11 game span during this stretch, Texeira was walked multiple times in 9 of those games, including 4 walks in a game against UM ASS Lowell, a career high. 5 of her 25 walks in March were intentional.

Another preseason award hopefully means another stellar season for Texeira. The Golden Panthers look to have a bounce back season after finishing a measly 10-14 in conference, placing them fifth out of six teams in Conference USA-East, and 9th overall in Conference USA. Florida International University hosted the 2015 Conference USA Softball tournament, but was not a part of it, and going 4-7 in the 11 last regular season games was crucial for their tournament hopes.

Head Coach Gator Rebhan and the Florida International University softball team has 17 members returning to their squad, three of them being the best hitters in their rotation last season. The top pitcher and a dominant staff are also a part of the players returning, and the season looks to be filled with a newfound hunger. The softball team begins their campaign with the FIU Invitational, with the first game against in-state rival school Florida State University being scheduled for Feb. 12 at 7 p.m.

**Panthers add defensive line coach Paul Volero**

**SANTIAGO ARCHEIRI**

Staff Writer

santiago.archeiri@fiusm.com

It has been announced on Jan. 22nd that Head Coach Ron Turner has added Paul Volero to his coaching staff for next season. He will replace Tem Lukabe, who will be the linebackers coach at Western Michigan University, as defensive line coach. Here’s what Turner said about the hiring during his press conference:

> “Paul (Volero) brings a lot of energy, enthusiasm and knowledge to our staff. He was around our program last year and got a chance to see our guys and get familiar with them. I’m excited. He’s a Miami guy and has a lot of connections here. So he’ll do an outstanding job recruiting. He’s a big addition to our program.”

Volero is looking forward to work under Turner in the 2016 season and enjoys living in Miami. “I’m excited and delighted to be part of the Panther family in a great city like the city of Miami, where there is no better football in the world,” Volero said.

Volero’s resume and football experience qualities in the reason why Turner hired him in the first place. He bounced around to different schools around the country after he finished college and his is football career. He played college ball at both Arizona Western College and Glenville State College. He earned his bachelor’s degree from Nova Southeastern University in 2004. Two years later he earned his master’s from West Virginia University.

As a player at Glenville State College in West Virginia, he helped lead his team to an NCAA national championship despite becoming a runner-up in 1993. He started coaching defensive line in 1996 for GSC. He came to Miami to serve as a defensive coordinator in high school teams such as Miami Senior High School, North Miami Senior High School and Booker T. High School from 1997-2002. He would then spent a season as an assistant strength and conditioning coach and defensive line coach at University of South Florida in Tampa. A year later he served as a special team quality control coach and academic graduate assistant at West Virginia University. He contributed by breaking down special teams and scheme implementation. He also monitored the Mountaineers’ production on special teams. Spending two years at WVU, he was part of the staff that led the Mountaineers to Big East Conference championships in both 2004 and 2005 seasons. With the two consecutive conference titles, he also helped with two bowl victories (Sugar Bowl and Gator Bowl). He then joined Central Michigan University as special teams coordinator and defensive line coach for three seasons.

In 2010-2011, he moved to Key West, Fla. to serve as defensive coordinator at Key West High School. He would then take a position at Washington Sr University as an outside linebackers coach for two years (2012-2014) under Mike Leach until finally found his way to FIU as a defensive quality control coach. With his past experience, he will help lead this Panther’s defensive Line unit that has to replace their two sack leaders Michael Wakefield and Denzel Perine.
SAND VOLLEYBALL

PANTHER PROFILE

Florida native fights for top 10 spot

STEFANO RIVERA
Staff Writer
stefano.rivera@fiusm.com

The countdown to the 2016 Florida International University women’s beach volleyball season is intensifying as each day passes. The Panthers will aim to take the sand on Friday, Mar. 4, in the FIU Fort Lauderdale Beach Invitational. This event, which extends through Saturday, Mar. 5, will give the team a test early in the season.

One of the many players who will be fighting for a top-10 spot on the roster is sophomore, Kari Peterson. Peterson, a Boca Raton native, joins graduate student, Tina Toghiyani, a Gainesville native, as the only players on the team from Florida.

Peterson attended Spanish River Community High School in her hometown and had much success playing indoor volleyball. In 2012, she was awarded the Sharks’ Impact Player, and in 2013, Offensive Player of the Year. To finish off her high school career, she was Spanish River’s Most Valuable Award in 2014.

Peterson was also involved in club volleyball throughout her years in high school. She joined Gold Coast Volleyball Club and participated in both indoor and beach volleyball.

Peterson used her successful high school career to make herself known and gain recognition. She received offers aside from FIU including the University of Hawaii, one of the best programs in the nation, and Tulane University.

Currently majoring in psychology, Peterson is focused on her studies and plans to attend law school after her career at FIU is finished.

Volleyball runs through Peterson’s family; her cousin, Brittany Tieg, was a two-time All-American in sand volleyball. Tieg won the awards when she was at Florida State University in 2012, and Hawaii in 2014.

Peterson was recruited by FIU to play both indoor and beach volleyball. However, after only playing one season of indoor in 2014, she decided to fully dedicate her game to the sand.

“I just love beach game,” Peterson said, “indoor was a great experience, but I’m meant to be outside in the sand.”

Last season, she appeared in two matches, both in exhibition play. Teamed up with current junior, Anabela Saturic, the duo defeated the University of South Carolina in the Palmetto Invitational, and Florida Atlantic University in the Doctor’s Hospital Surf and Turf Invitational. A large part as to why Peterson saw little playing time a year ago was because of the plethora of seniors on the roster. With six seniors occupying most of the top-10 spots, it was difficult for her to fight her way to the top. However, she is ready for the challenge and wants similar results as last season.

“They left behind a great legacy,” Peterson said, “we all still talk about them and we want to be as good as them and just keep our program strong.”

Just how good has the Panther’s beach volleyball program become in its brief four-year span? More than half of FIU’s graduated players have gone on to play professionally and Peterson would like to be part of that group as well.

Peterson’s goal for this season is simple. “Win as many games as we can, fight hard, and get that ring,” Peterson stated.

Prior to his NFL success, Hilton was a standout player in his college days playing for the Panthers. His name in the record books on the top of almost every single offensive category.

He holds the FIU career receiving records for receptions with 229 and has 3,351 receiving yards and 24 touchdowns which are both in the top five in FIU football history.

He was also a key player in the school’s first ever bowl game and only bowl win. In the 2010 Little Caesars Pizza Bowl, Hilton returned a kickoff for a touchdown in the second half of the game against Toledo.

He was also instrumental in a late play, helping FIU get the first down and keeping them alive to eventually set up the winning field goal.

He was named the Little Caesars Pizza Bowl MVP for his efforts in helping his team beat Toledo, 34–32. To wrap up his historic season, Hilton was honored as Sun Belt Player of the Year, as well as being named to the All-Sun Belt Conference First Team at the wide receiver and return specialist positions. He finished his junior season with 2,089 all-purpose yards, 848 of them on receptions over 59 catches and 282 rushing yards over 30 carries, a personal best.
The Panthers notched their fourth loss of the 2015-2016 collegiate season this past weekend when they traveled to Fort Myers, Florida, to face the Florida Gulf Coast University Eagles. The Panthers posted their lowest score of the season against the Eagles, with a final score of 141-64. Head Coach Randy Horner said he “knew they’d be a challenge,” so this final came as no real surprise to the veteran coach as he chases back-to-back Conference USA championships.

Only managing to accumulate two first place finishes all day, it was obvious that Florida International was outmatched in the pool in a way that they aren’t used to. It turns out though, that this was entirely by design. After going undefeated last season, the team “created a schedule specifically to not go undefeated,” said Horner. When a team is as talented as FIU, it can be very easy to become complacent. Without very many real challenges, you might see a swimmer take a few turns with less intensity than what you’d be used to, or a diver go with a simple, low-risk attempt, and not really challenge themselves. This is why Horner wanted his team to face more “real challenges” this season.

As much as wins and losses don’t seem to matter to this squad, especially not until Conference Championships, any normal human being can’t be happy with losing, right? Four losses, including a couple that could have just as easily been wins for the Panthers, almost certainly have to get under the team’s skin. Horner won’t budge on this, no matter how many times he’s asked, and that’s the mark of a coach with a goal. “We just gotta stay focused,” Horner says, when it would be no less than human to say, well, just about anything else.

Kyna Pereira is having an amazing sophomore season, aside from all this, as it seems that every time FIU competes, whether they win or lose, she’s posted a personal best, pool-record or taken first place in whichever event she’s a part of. In fact, she was the swimmer responsible for both of those aforementioned first place finishes at FGCU, and is on a five-race winning streak in the 1000 meter. The distance swimmer from Umkomaas, South Africa, will look to carry all that momentum forward, at least into the Panthers’ senior day, at home against the University of Miami Hurricanes. Saturday, Jan 30 at noon will be the second time the two Division-1 schools from Miami will be facing off, with FIU hosting both and already taking the first decision. The Hurricanes will attempt to split the season series with their neighbors, and avoid being swept by the mid-major, they won’t get any help from the Panthers and their coach on senior day. “Nothing will change, it’ll just be a normal meet. The seniors will be recognized before the meet begins, and then nothing else will change,” Horner said.
